GENERAL INFORMATION

This is how the Thermostart aid works: Fuel from the leak-off line is fed to the fuel reservoir 1 (fig. 2), located above the cylinder head. This reservoir is constantly kept full; surplus fuel returns to the fuel tank. To operate, push switch 21. Current then flows through leads 19 and 18 to a filament inside the burner 17, located in the intake manifold. As the filament heats up, a heat-sensitive valve (also installed in the burner) opens, allowing fuel to enter the burner through fuel line 15.

The hot filament ignites the fuel which heats the air in the intake manifold, thus providing the engine with preheated intake air for easy starting.

REPAIR

Remove hood and cowl side panel.

Remove parts of Thermostart aid as shown in fig. 2.

When removing push button switch 21, disconnect ground cable from negative (-) pole of batteries.

Check all parts for serviceability and replace, if necessary.

Install all parts as shown in fig. 2. When installing Thermostart burner 17, coat threads of burner with a suitable sealant and tighten burner to the specified torque.

IMPORTANT: Before operating Thermostart aid for the first time after installation, make sure fuel reservoir is filled to prevent damage to the Thermostart aid.

TORQUES FOR HARDWARE

Thermostart burner
in intake manifold 2 m.kp 14.5 ft.lbs.
