Cost Optimization of Structures Hojjat Adeli,Kamal C Sarma,2006-11-02 While the weight of a structure constitutes a significant part of the cost a minimum weight design is not necessarily the minimum cost design Little attention in structural optimization has been paid to the cost optimization problem particularly of realistic three dimensional structures Cost optimization is becoming a priority in all civil engineering projects and the concept of Life Cycle Costing is penetrating design manufacturing and construction organizations In this groundbreaking book the authors present novel computational models for cost optimization of large scale realistic structures subjected to the actual constraints of commonly used design codes As the first book on the subject this book Contains detailed step by step algorithms Focuses on novel computing techniques such as genetic algorithms fuzzy logic and parallel computing Covers both Allowable Stress Design ASD and Load and Resistance Factor Design LRFD codes Includes realistic design examples covering large scale high rise building structures Presents computational models that enable substantial cost savings in the design of structures Fully automated structural design and cost optimization is where large scale design technology is heading thus Cost Optimization of Structures Fuzzy Logic Genetic Algorithms and Parallel Computing will be of great interest to civil and structural engineers
