Noticeably these bioactive compounds contain glycosides steroids plant sterols and peptides. The exploration biosynthesis and amplification of potential biological activities of natural and non natural molecules have remained unchanged as one of the most exciting trends in biotechnological products. Most bioactive compounds are usually isolated from plants microorganisms marine organisms and fungi. However the yield of natural products is usually low and requires time consuming procedures for industrial production. Furthermore chemical synthesis is a costly harmful alternative that requires multi step isolation and purification processes. Nevertheless plant molecular engineering has significantly improved using industrially preferred microorganisms such as *Escherichia coli* *Saccharomyces cerevisiae* *Corynebacterium* *Bacillus* and *Pseudomonas*. These microorganisms are promising alternatives for the biosynthesis of industrial products. In recent years a wide variety of novel technologies for engineering plants and microbes has been developed to produce natural and non natural compounds from renewable biomasses. Along with evolutionary engineering metabolic engineering and systems biology synthetic biology is expected to further improve the productivity of the synthesis compounds.
