Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control lever, an electrical motor can operate the drive control technology, instead of a hydraulic actuator, is a digital electro-hydraulic controller equipped with a very powerful microcontroller performs all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a control that already identifies the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes digital malfunctions and system errors, and displays an error message on the display/monitor on the control interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light failure
- Recognition function of the internal combustion engine
- The truck status with internal status indicators and all the larger ones
- The main function as the emergency function, the internal combustion engine switches off
- An error code appears on display

These functions can be activated by switching off the combustion engine with the key switch. During a restart, the control unit checks whether the error is still present. If the error is no longer present, the truck resumes normal operation. If the error persists, the error code reappears on the display and one of the measures listed above is carried out.

Changing the controller

4.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge (ESD) damage to working elements will occur if the controller is moved.

The controller is equipped with a "Threat plug" which is attached to the back to avoid static damage. Connections must never be left open. The upper part number and the software version of the controller can be read out via the back connector.

If the controller is replaced, the personnel work unit controller must be identified and plug adapted to the cable harness. All necessary information is available on the cable harness.
