professionals researchers scholars practitioners academicians instructors and students Applied Multivariate Research
Lawrence S. Meyers, Glenn Gamst, A.J. Guarino, 2006 Multivariate designs were once the province of the very few exalted
researchers who understood the underlying advanced mathematics Today through the sophistication of statistical software
packages such as SPSS virtually all graduate students across the social and behavioural sciences are exposed to the complex
multivariate statistical techniques without having to learn the mathematical computations needed to acquire the data output
These students in psychology education political science etc will never be statisticians and appropriately so their preparation
and coursework reflects less of an emphasis on the mathematical complexities of multivariate statistics and more on the
analysis and the interpretation of the methods themselves and the actual data output This book provides full coverage of the
wide range of multivariate topics in a conceptual rather than mathematical approach The author gears toward the needs
level of sophistication and interest in multivariate methodology of students in applied areas that need to focus on design and
interpretation rather than the intricacies of specific computations The book includes Coverage of the most widely used
multivariate designs multiple regression exploratory factor analysis MANOVA and structural equation modeling Integrated
