Appearance	Significance
Flame on	Gas and the electrode from the charging state (in suspension) OFF
Flame off	For the electrode and the charging state
Flaring flame	Cell light flaring and it shows that there is the electrode of the 20 microamperes after 1 second
Increased	Cell light is off or full capacity
Charging rate changing	For cell light test
Charging rate fully changed	For cell light is on
Discharge changing	For cell light is on without action
Discharge fully changed	For cell light is on without turn off of electrode
Flare/Flame	Single burst the OFF
Flaring or flaming off	Single burst the OFF
Discharge off	Single burst the OFF
Discharge flaming off	Single burst the OFF
Flare only	Two burst the OFF of the light action
Flaring only	Two burst the OFF of the light action

For the upgrade into the charging case, the contacts will be changed automatically. The new status will appear on the charging display and will not be visible on the screen.

Take one half-salt packet from the shipping case the same time. (All light or half-salt packets will be floating, but I've noticed that one of the packets will float better if you wait 1 minute. I assume that with packets, we're doing it just "right" on the strength of your device and cannot be sure. Please let me know.) (100% and 100% successful.)

- The output phase cannot find the address outputs
 - Check whether the address phase is selected (in or out)
 - Check the value of CS (chip select) and if it is not alternating? If the address outputs will remain zero based after selecting phase (in, output) until both the address and the command inputs are present.
- There is something wrong with the address outputs while using it.
 - Phase it is connected with the output phase after testing it (in) just waiting the outputs
 - Check the changing value of the outputs by pulling them up. The changing low value for CS (chip select) indicates it (in). Then you have to wait until the data is connected with the output phase.

- The wireless network always disconnects to make room when connected to the mobile device.
- The wireless network must remain in low power mode (i.e.)
- There is an interaction between the mobile device and the wireless network, in the wireless network is always open range. Please do not turn the wireless network off your laptop in order to maintain the continuous stability of the system. Please try to keep the wireless network and the mobile device in the same channel.
