## FORCE AND MOTION

---

1. Define force. Also give four main functions of a force.

### Force

Force is an agent which is used to produce acceleration in the body.

Or

The product of mass and acceleration is called force.

$$\text{Force} = \text{mass} \times \text{acceleration}$$

$$F = ma$$

The S.I unit of force is  $\text{kgm/sec}^2$  or Newton.

### Force helps us:

- To stop a moving body
- To move a stationary body
- To change the shape of a body
- To change the direction of a body

2. State and explain Newton's first law of motion.

### Newton's first law of motion

Sir Isaac Newton studied the relative motion of bodies in the universe and put forwarded some laws which are known as Newton's laws of Motion.

### Statement

Everybody in the universe keeps continue its state of rest or of uniform motion until an unbalanced force acts upon it.

### Explanation

If a body is in the state of rest it will be at rest, if a body is in motion it will remain in motion until an external force is applied on the body. The force which is applied to change the state of body must overcome the inertia of the body.
