Designing and Implementing IP/MPLS-Based Ethernet Layer 2 VPN Services Zhuo Xu, 2010-01-15
A guide to designing and implementing VPLS services over an IP/MPLS switched service provider backbone. Today's communication providers are looking for convenience, simplicity, and flexible bandwidth across wide area networks, but with the quality of service and control that is critical for business networking applications like video, voice, and data. Carrier Ethernet VPN services based on VPLS make this a reality. Virtual Private LAN Service (VPLS) is a pseudowire (PW) based multipoint-to-multipoint layer 2 Ethernet VPN service provided by service providers. By deploying a VPLS service to customers, the operator can focus on providing high throughput, highly available Ethernet bridging services and leave the layer 3 routing decision up to the customer. Virtual Private LAN Services (VPLS) is quickly becoming the number one choice for many enterprises and service providers to deploy data communication networks. Alcatel-Lucent VPLS solution enables service providers to offer enterprise customers the operational cost benefits of Ethernet with the predictable QoS characteristics of MPLS.
