Ultrafast Fiber Switching Devices and Systems Mohammed N. Islam, 1992-08-06 This 1992 book surveys the field of ultrafast fiber switching devices and systems that have potential processing speeds in excess of 50 gigabits per second The treatment covers basic physical principles device physics and

systems applications The purpose of the book is to provide a complete tour of the key research issues and approaches in ultrafast switching Topics covered include routing and logic devices solitons in optical fibers and the application of ultrafast gates to telecommunications transmission systems local area networks and optical computing The author is a member of the Technical Staff in basic research at AT T Bell Laboratories Holmdel and is excellently positioned to provide this state of the art survey in this exciting and advancing field The book will be of great value to all researchers and graduate students working in the areas of high speed electronics optical data processing nonlinear guided wave optics and photonic switching

The Elements of Nonlinear Optics Paul N. Butcher, David Cotter, 1990 There has recently been a rapid growth of activity in nonlinear optics Effects such as frequency doubling stimulated Raman scattering phase conjugation and solitons are of great interest both for their fundamental properties and their many important applications in science and engineering It is mainly these applications especially in telecommunications and information processing that have stimulated the recent surge of activity This book is a self contained account of the most important principles of nonlinear optics Assuming only a familiarity with basic mathematics the fundamentals of nonlinear optics are fully developed from basic concepts The essential quantum mechanical apparatus is introduced and explained In later chapters the underlying ideas are illustrated by discussing particular experimental configurations and materials This book will be an invaluable introduction to the field for beginning graduates in physics or engineering and will provide an excellent overview and reference work for active researchers in the field

Holographic and Speckle Interferometry Robert Jones, Catherine Wykes, 1989-01-26 Holographic and speckle interferometry are optical techniques which use lasers to make non contracting field view measurements at a sensitivity of the wavelength of light on optically rough i e non mirrored surfaces They may be used to measure static or dynamic displacements the shape of objects and refractive index variations of transparent media As such these techniques have been applied to the solution of a wide range of problems in strain and vibrational analysis non destructive testing NDT component inspection and design analysis and fluid flow visualisation This book provides a self contained unified theoretical analysis of the basic principles and associated opto electronic techniques for example Electronic Speckle Pattern Interferometry In addition a detailed discussion of experimental design and practical application to the solution of physical problems is presented In this new edition the authors have taken the opportunity to include a much more coherent description of more than twenty individual case studies that are representative of the main uses to which the techniques are put The Bibliography has also been brought up to date

Paperbound Books in Print, 1992 *Nature*, 1887 **Fabry-Perot Interferometers** G. Hernandez, 1988-08-26 This book describes the Fabry Perot interferometer and its variants as well as its use optimisation and applications The author begins with an historical perspective on the development of the instrument Because of the quantitative uses of the device the text tends to be mostly mathematical in its treatment However there is also much practical detail on the use and optimization of the Fabry Perot interferometer and

discussion of its classical uses such as in metrology and its contemporary applications such as in lasers. In addition, the book contains a comprehensive bibliography summarizing the extensive literature on the subject. This book will appeal both to high-resolution practitioners such as spectroscopists and to the laser community since the Fabry-Perot is not only an integral part of the laser but is also used to characterize its optical and spectroscopic behaviour.
