Materials Science and Engineering William D. Callister, 2006-01 *Engineering Solutions for Sustainability* Jeffrey Fergus, Brajendra Mishra, Dayan Anderson, Emily Allyn Sarver, Neale Neelameggham, 2016-12-01 With impending and burgeoning societal issues affecting both developed and emerging nations the global engineering community has a responsibility and an opportunity to truly make a difference and contribute. The papers in this collection address what materials and resources are integral to meeting basic societal sustainability needs in critical areas of energy transportation housing and recycling. Contributions focus on the engineering answers for cost effective sustainable pathways the strategies for effective use of engineering solutions and the role of the global engineering community. Authors share perspectives on the major engineering challenges that face our world today identify discuss and prioritize engineering solution needs and establish how these fit into developing global demand pressures for materials and human resources Engineering Solutions for Sustainability Jeffrey W. Fergus, Brajendra Mishra, Dayan Anderson, Emily Allyn Sarver, Neale R. Neelameggham, 2015-07-29 This book contains a collection of papers presented at Engineering Solutions for Sustainability Materials and Resources II a special symposium organized as part of the TMS 2015 Annual Meeting the strategies for effective use of engineering solutions and the role of the global engineering community. Authors share perspectives on the major engineering challenges that face our world today identify discuss and prioritize engineering solution needs and establish how these fit into developing global demand pressures for materials and human resources *Slope Stability and Erosion Control: Ecotechnological Solutions* Joanne E. Norris, Alexia Stokes, Slobodan B. Mickovski, Erik Cammeraat, Rens van Beek, Bruce C. Nicoll, Alexis Achim, 2008-02-29 This chapter describes the processes involved in the transport of material over hillslopes. Hillslopes provide the gradients enabling material to be transported from the slopes themselves towards the valley bottoms directly by gravity alone or by water flowing down over the surface. Gravity has the potential to transfer material downslope if the material resistance to counteract it is insufficient. Similarly water and wind flowing along the surface exert a drag on soil particles and have the potential to entrain material. After the gradient has fallen below a critical threshold to keep the material in transport deposition occurs. Conventionally slope processes in which gravity alone is the dominant transporting agent are called mass movements. Brunsden 1984 Processes in which other agents dominate are called erosion e.g. wind or water erosion. Flowing water is an important transporting agent on which the emphasis is placed here. Although mass wasting is a natural process its incidence and impact may be exacerbated by human activities. Crozier 1986 Morgan 2005 A situation may ultimately arise in which human interests become unsafe or unsustainable. This impact is not only directly felt in the areas where material is removed or deposited and indirectly mass wasting may have an effect on soil and water quality in areas located further downstream. In the following sections a brief overview is given of the mechanisms morphology causes and consequences of mass movements and erosion **Nanotechnology** Louis Theodore, 2006-01-03 A

practical workbook that bridges the gap between theory and practice in the nanotechnology field. Because nanosized particles possess unique properties, nanotechnology is rapidly becoming a major interest in engineering and science. Nanotechnology: Basic Calculations for Engineers and Scientists is a logical follow up to the author's previous text, Nanotechnology: Environmental Implications and Solutions, presents a practical overview of nanotechnology in a unique workbook format. The author has developed nearly 300 problems that provide a clear understanding of this growing field in four distinct areas of study: Chemistry fundamentals and principles, Particle technology Applications, Environmental concerns. These problems have been carefully chosen to address the most important basic concepts, issues, and applications within each area, including such topics as patent evaluation, toxicology, particle dynamics, ventilation, risk assessment, and manufacturing. An introduction to quantum mechanics is also included in the Appendix. These stand alone problems follow an orderly and logical progression designed to develop the reader's technical understanding. This is certain to become the pacesetter in the field, a text to benefit both students of all technical disciplines and practicing engineers and researchers.

Dr. Howard Beim, Professor of Chemistry, U.S. Merchant Marine Academy; Dr. Theodore has covered most of the important nanotechnology subject matter in this work through simple, easy-to-follow problems.

John McKenna, President and CEO, ETS Inc. High Entropy Alloys T.S. Srivatsan, Manoj Gupta, 2020-07-20

This book provides a cohesive overview of innovations, advances in processing and characterization, and applications for high entropy alloys (HEAs) in performance critical and non-performance critical sectors. It covers manufacturing and processing, advanced characterization and analysis techniques, and evaluation of mechanical and physical properties.
