all of the chapter openers have been changed and incorporate a model and photograph of an application of organic chemistry such as Taxol from the pacific yew tree The book introduces a running application in the Interlude boxes and in the problems relating agricultural chemicals intended to unify the subject further for students All of the problems have been reorganized by topic to make easier to assign and review New problem categories have been added The new problem categories are In the Field with Agrochemicals and In the Medicine Cabinet to reinforce the focus on applications McGraw-Hill Concise Encyclopedia of Science and Technology, Sixth Edition McGraw-Hill Education,2009-06-10 Publisher's Note Products purchased from Third Party sellers are not guaranteed by the publisher for quality authenticity or access to any online entitlements included with the product A major revision of this classic encyclopedia covering all areas of science and technology the McGraw Hill Concise Encyclopedia of Science and Technology Sixth Edition is prepared for students professionals and general readers seeking concise yet authoritative overviews of topics in all major fields in science and technology The McGraw Hill Concise Encyclopedia of Science and Technology Sixth Edition satisfies the needs of readers for an authoritative comprehensive reference work in a relatively compact format that provides the breadth of coverage of the McGraw Hill Encyclopedia of Science Technology 10th Edition Written in clear nonspecialist language understandable to students and general readers yet with sufficient depth for scientists educators and researchers this definitive resource provides 7100 concise articles covering disciplines of science and technology from acoustics to zoology Extensively revised content with new and rewritten articles Current and critical advances in fast developing fields such as biomedical science chemistry computing and information technology cosmology environmental science nanotechnology telecommunications and physics More than 1600 two color illustrations 75 full color plates Hundreds of tables and charts 1300 biographical sketches of famous scientists Index containing 30 000 entries Cross references to related articles Appendices including bibliographies and useful data McGraw Hill Professional science reference products are supported by MHEST com a website offering updates to articles periodic special features on important scientific topics multimedia content and other features enriching the reader's experience We encourage readers to visit the site often Fields Covered Include Acoustics Aeronautics Agriculture Anthropology Archeology Astronomy Biochemistry Biology Chemistry Computers Cosmology Earth Science Engineering Environmental Science Forensic Science Forestry Genetics Geography Immunology Information Science Materials Science Mathematics Medicine and Pathology Meteorology and Climate Science Microbiology Nanotechnology Navigation Neuroscience Oceanography Paleontology Physics Physiology Psychiatry Psychology Telecommunications Theoretical Physics Thermodynamics Veterinary Medicine Virology Zoology Colour and the Optical Properties of Materials Richard J. D. Tilley,2010-12-20 Colour and the Optical Properties of Materials carefully introduces the science behind the subject along with many modern and cutting edge applications chosen to appeal to today's students For science students it provides a broad introduction to the subject and the many applications of colour To more applied students such as

engineering and arts students it provides the essential scientific background to colour and the many applications New to this Edition The chapter framework of the first edition will be retained with each chapter being substantially rewritten and some material would be relocated Some chapters will be rewritten in a clearer fashion e g There have been no significant advances in the understanding of rainbows recently but the text could be clarified and improved Colour has been an important attribute of many nano particle containing systems such as quantum dots This aspect will be included e g the colour of gold ruby glass described in Chapter 5 as part of scattering phenomena now is better treated in terms of gold nanoparticles and surface plasmons This would probably be transferred to Chapter 10 and considered in tandem with the colour of metals such as copper silver and gold A similar state of affairs applies to silver nanoparticles and polychromic glass Some chapters will include extensive new material e g Chapter 8 colours due to molecular processes organic LEDs etc and Chapter 12 Displays touch screen technologies For all chapters it would be intended to take into account the current scientific literature up to the time of submission say up to the end of 2009 The end of chapter Further Reading sections would reflect this up to date overview The end of chapter problems will be strengthened and expanded
