

## ATTACHMENT TO THE TRACTOR

P.T.O. driven model 15 and 20 balers may be attached to all types of tractor, the horse-power of which is 30 or above. However, in very hilly or soft ground conditions, or where heavy sledges or wagons are used, a 35 - 50 horsepower tractor is to be preferred.

The model 15 and 20 balers are available with a suitable drawbar and suitable P.T.O. drive shaft arrangements to enable them to be fitted to practically all models of tractor on the market. Whilst these balers can be used quite satisfactorily on tractors fitted with fixed lateral drawbars a swinging type drawbar is to be preferred as it generally allows better cornering.

The baler hitch plate can be adjusted vertically to allow the baler drawbars to be approximately level when fitted to the tractor. The baler drawbar can be quickly changed from the working to the transport position by the release of a spring loaded plunger (operated by means of a rope from the tractor seat in the case of the model 20 baler - refer. to fig. 5).

### 15 AND 20 BALER P.T.O. CONNECTION

Because the distance from the end of the tractor P.T.O. shaft to the hitchpin varies on different makes and models of tractor, optional lengths of P.T.O. shaft are available for both 15 and 20 model balers.

On the majority of European manufactured tractors the P.T.O. shaft/hitchpin distance varies from 17" - 23", whilst on most tractors produced in North America or adhering to A.S.A.E. standards, this distance is 14". The M-F tractor swinging drawbar is adjustable to 14" or 19" distances.
