### **Chapter 20 Electric Potential and Electrical Potential Energy Q.1CQ**

In one region of space the electric potential has a positive constant value. In another region of space the potential has a negative constant value. What can be said about the electric field within each of these two regions of space?

**Solution:**

Electric field is related to electric potential by the following relation,  $E = \frac{-\Delta V}{\Delta x}$

This means, electric field is a measure of change in electric potential with change in position.

As the electric potential in each of these two regions is constant with their opposite polarity, so the electric field in both the regions must be zero.

### **Chapter 20 Electric Potential and Electrical Potential Energy Q.1P**

CE An electron is released from rest in a region of space with nonzero electric field. As the electron moves, does it experience an increasing or decreasing electric potential? Explain.
