The book provides food scientists, managers and technologists and food studies students with much needed facts in a single concise but thorough source. *Making Safe Food* embraces the concerns of all those involved in the production, distribution and sale of food; it is the first book to bridge the gulf between microbiological books that detail laboratory methodologies and quality management books written for those with a management and business studies background. The authors are senior lecturers in the food science and technology and microbiology departments at The University of Reading, one of the leading food science research and teaching centers in Europe. Very short version 11 6 91 WR *Making Safe Food* is a concise practical text which focuses on the design and implementation of microbiological practices in the food industry. It is the first book to bridge the gulf between microbiological books that detail laboratory methodologies and quality management books written for those with a management and business studies background. Implementing hygiene and microbiological quality in the food factory. Designing and operating a safe laboratory. Critically evaluating microbiological techniques for quality assurance. Installing a quality management system. Seeking certification under ISO 9000 BS 5750. Legislative aspects. Managers, scientists and technologists in the food industry. Administrators of environmental health, public health and food quality in local and central government and students following food studies courses at diploma and degree level will find this book an invaluable guide. Microbiological Safety and Quality of Food Barbara M. Lund, Tony C. Baird-Parker, Grahame W. Gould, 2000. This authoritative two volume reference provides valuable necessary information on the principles underlying the production of microbiologically safe and stable foods. The work begins with an overview and then addresses four major areas. Principles and application of food preservation techniques covers the specific techniques that defeat growth of harmful microorganisms, how those techniques work, how they are used and how their effectiveness is measured. Microbial ecology of different types of food provides a food by food accounting of food composition, naturally occurring microflora, effects of processing, how spoiling can occur and preservation. Foodborne pathogens profiles the most important and the most dangerous microorganisms that can be found in foods including bacteria, viruses, parasites, mycotoxins and mad cow disease. The section also looks at the economic aspects and long term consequences of foodborne disease. Assurance of the microbiological safety and quality of foods scrutinizes all aspects of quality assurance including HACCP, hygienic factory design, methods of detecting organisms, risk assessment, legislation and the design and accreditation of food microbiology laboratories. Tables, photographs, illustrations, chapter by chapter references and a thorough index complete each volume. This reference is of value to all academic research, industrial and laboratory libraries supporting food programs and all institutions involved in food safety, microbiology and food microbiology, quality assurance and assessment, food legislation and generally food science and technology. **Principles and Practices**
