DeGarmo's Materials and Processes in Manufacturing Ronald A. Kohser, Peter C. Collins, J. T. Black, 2025-02-11 Classic textbook introducing key concepts in manufacturing with a focus on practical applications, updated to include the latest industry developments. For over 65 years, DeGarmo's Materials and Processes in Manufacturing has comprehensively presented both traditional and new manufacturing materials, processes, and systems in a descriptive, non-mathematical manner. Students are first introduced to a range of engineering materials, including metals, plastics, and polymers, ceramics, and composites. The processes used to convert this stuff into things are then described along with their typical applications, capabilities, and limitations. Segments cover casting, forming, machining, welding, and joining, and additive manufacturing. Supporting chapters present concepts relating to material selection, heat treatment, surface finishing, measurement, inspection, and manufacturing systems. The Fourteenth Edition has been updated to reflect the most current technologies. Coverage of additive manufacturing, 3D printing, has been significantly expanded along with updates on new and advanced materials. Case studies are featured throughout the book, and review problems have been placed at the end of each chapter. A full collection of online bonus material is provided for both students and instructors.
