 Arne Haaland,2008-03-06 This book provides a systematic description of the molecular structures and bonding in simple
 compounds of the main group elements with particular emphasis on bond distances bond energies and coordination
 geometries The description includes the structures of hydrogen halogen and methyl derivatives of the elements in each group
 some of these molecules are ionic some polar covalent The survey of molecules whose structures conform to well established
 trends is followed by representative examples of molecules that do not conform We also describe electron donor acceptor and
 hydrogen bonded complexes Chemists use models to systematize our knowledge to memorize information and to predict the
 structures of compounds that have not yet been studied The book provides a lucid discussion of a number of models such as
 the Lewis electron pair bond and the VSEPR models the spherical and polarizable ion models and molecular orbital
 calculations and it outlines the successes and failures of each
