Measuring Strategies in Tactile Coordinate Metrology Robert Roithmeier, 2014-10-24 Today there is hardly any workpiece whose form parameters cannot be measured by means of coordinate measuring machines. The universal use of these machines allows a wide range of application of this technology which however increases inevitably the complexity of its handling. The numerous options of the machine specific operating software on the one hand and the various theoretical considerations regarding a target oriented treatment of measuring jobs on the other hand result in the fact that the measuring results obtained from the same coordinate measuring machine on the same workpiece under similar conditions may differ. In order to increase the comparability of measuring results it is necessary to provide the operators of coordinate measuring machines in addition to a well founded AUKOM training with procedure options for planning performing evaluating and documenting measurements. This book by the ZEISS Metrology Academy makes a contribution towards achieving these targets. *Springer Handbook of Metrology and Testing* Horst Czichos, Tetsuya Saito, Leslie E. Smith, 2011-07-22 This Springer Handbook of Metrology and Testing presents the principles of Metrology the science of measurement and the methods and techniques of Testing determining the characteristics of a given product as they apply to chemical and microstructural analysis and to the measurement and testing of materials properties and performance including modelling and simulation. The principal motivation for this Handbook stems from the increasing demands of technology for measurement results that can be used globally. Measurements within a local laboratory or manufacturing facility must be able to be reproduced accurately anywhere in the world. The book integrates knowledge from basic sciences and engineering disciplines compiled by experts from internationally known metrology and testing institutions and academe as well as from industry and conformity assessment and accreditation bodies. The Commission of the European Union has expressed this as there is no science without measurements no quality without testing and no global markets without standards. **Intelligent Transport Systems Standards** Bob Williams, 2008 To list summarize and categorize intelligent transportation standards ITS Reviews best practices and provides listings for standards developing organizations at national and international levels.
