MECHATRONICS

ELECTRONIC CONTROL
SYSTEMS IN MECHANICAL AND
ELECTRICAL ENGINEERING

W. BOLTON

The integration of electronic engineering, mechanical engineering, control and computer engineering – mechatronics – lies at the heart of the innumerable godgets, processes and technology without which modern life would seem impossible. From auto-focus cameras to car engine management systems, and from state-of-the-art robots to the humble washing machine, mechatronics has a hand in them all.

This book presents a clear and comprehensive introduction to the area. Practical and applied, it helps you to acquire the mix of skills you will need to comprehend and design mechatronic systems. But it also goes much deeper, explaining the very philosophy of mechatronics, and, in so doing, provides you with a frame of understanding to develop a truly interdisciplinary and integrated approach to engineering.

NEW TO THIS EDITION:

- An expanded first chapter gives a comprehensive introduction to the subject.
- More in-depth discussion of op-amps, mechanisms, and motor selection to improve clarity and extend applications.
- A new appendix on electrical circuit analysis is included to make the basic methods used for both d.c. and a.c. circuit analysis easily accessible to readers.
- Updated resources for instructors available at www.pearsoned.co.uk/Bolton

Mechatronics is essential reading for students requiring an introduction to this exciting area at undergraduate and higher diploma level.

BILL BOLTON was formerly Consultant to the Further Education Unit and Head of Research and Development and Monitoring at BTEC. He has also been a UNESCO consultant and is the author of many successful engineering textbooks.

Cutting Edge Robotics ,2010 **Automotive Power Systems** Dorin O. Neacsu, 2020-09-21 Vehicles are intrinsically linked to our lives This book covers all technical details of the vehicle electrification process with focus on power electronics The main challenge in vehicle electrification consists of replacing the engine based mechanical pneumatic or hydraulic ancillary energy sources with electrical energy processed through an electromagnetic device The book illustrates this evolutionary process with numerous series production examples for either of body or chassis systems from old milestones to futuristic luxury vehicles Electrification of ancillaries and electric propulsion eventually meet into an all electric vehicle and both processes rely heavily on power electronics Power electronics deals with electronic processing of electrical energy This makes it a support technology for the automotive industry All the automotive visions for the next decade 2020 2030 are built on top of power electronics and the automotive power electronics industry is expected at 15% compound annual growth rate the highest among all automotive technologies Hence automotive power electronics industry is very appealing for recent and future graduates The book structure follows the architecture of the electrical power system for a conventional engine based vehicle with a last chapter dedicated to an introduction onto electric propulsion. The first part of the book describes automotive technologies for generation and distribution of electrical power as well as its usage within body systems chassis systems or lighting The second part explores deeper into the specifics of each component of the vehicle electric power system Since cars have been on the streets for over 100 years each chapter starts with a list of historical achievements Recognizing the engineering effort span over more than a century ennobles the R D efforts of the new millennium Focus on history of electricity in vehicle applications is another attractive treat of the book The book fills a gap between books targeting practical education and works sharing advanced academic vision offering students and academics a quick tour of the basic tools and long standing infrastructure and offering practicing engineers an introduction on newly introduced power electronics based technologies It is therefore recommended as a must have book for students and early graduates in automotive power electronics activities ECMLG 2016 - Proceedings of the 12th European Conference on Management, Leadership and Governance, Proceedings of the 12th European Conference on Management Leadership and Governance
