Medieval Islamic Medicine:

Medicine and Religion Gary B. Ferngren, 2014-03-19 Explores the interplay of medicine and religion in Western societies Medicine and Religion is the first book to comprehensively examine the relationship between medicine and religion in the Western tradition from ancient times to the modern era Beginning with the earliest attempts to heal the body and account for the meaning of illness in the ancient Near East historian Gary B Ferngren describes how the polytheistic religions of ancient Mesopotamia Egypt Greece and Rome and the monotheistic faiths of Judaism Christianity and Islam have complemented medicine in the ancient medieval and modern periods Ferngren paints a broad and detailed portrait of how humans throughout the ages have drawn on specific values of diverse religious traditions in caring for the body Religious perspectives have informed both the treatment of disease and the provision of health care And while tensions have sometimes existed relations between medicine and religion have often been cooperative and mutually beneficial Religious beliefs provided a framework for explaining disease and suffering that was larger than medicine alone could offer These beliefs furnished a theological basis for a compassionate care of the sick that led to the creation of the hospital and a long tradition of charitable medicine Praise for Medicine and Health Care in Early Christianity by Gary B Ferngren This fine work looks forward as well as backward it invites fuller reflection of the many senses in which medicine and religion intersect and merits wide readership JAMA An important book for students of Christian theology who understand health and healing to be topics of theological interest and for health care practitioners who seek a historical perspective on the development of the ethos of their vocation Journal of Religion and Health

Health and Architecture Mohammad Gharipour, 2021-05-06 Health and Architecture offers a uniquely global overview of the healthcare

facility in the pre modern era engaging in a cross cultural analysis of the architectural response to medical developments and the formation of specialized hospitals as an independent building typology Whether constructed as part of Chinese palaces in the 15th century or the religious complexes in 16th century Ottoman Istanbul the healthcare facility throughout history is a built environment intended to promote healing and caring The essays in this volume address how the relationships between architectural forms associated with healthcare and other buildings in the pre modern era such as bathhouses almshouses schools and places of worship reflect changing attitudes towards healing They explore the impact of medical advances on the design of hospitals across various times and geographies and examine the historic construction processes and the stylistic connections between places of care and other building types and their development in urban context Deploying new methodological interdisciplinary and comparative approaches to the analysis of healthcare facilities Health and Architecture demonstrates how the spaces of healthcare themselves offer some of the most powerful and practical articulations of therapy
