Multiscale Modeling Abaqus:

Multiscale Modeling in Solid Mechanics Ugo Galvanetto, M. H. Aliabadi, 2010 This unique volume presents the state of the art in the field of multiscale modeling in solid mechanics with particular emphasis on computational approaches For the first time contributions from both leading experts in the field and younger promising researchers are combined to give a comprehensive description of the recently proposed techniques and the engineering problems tackled using these techniques The book begins with a detailed introduction to the theories on which different multiscale approaches are based with regards to linear homogenization as well as various nonlinear approaches It then presents advanced applications of multiscale approaches applied to nonlinear mechanical problems Finally the novel topic of materials with self similar structure is discussed

Handbook of Dynamic System Modeling Paul A. Fishwick, 2007-06-01 The topic of dynamic models tends to be splintered across various disciplines making it difficult to uniformly study the subject Moreover the models have a variety of representations from traditional mathematical notations to diagrammatic and immersive depictions Collecting all of these expressions of dynamic models the Handbook of Dynamic Sy

Multiscale Modelling in Sheet Metal Forming Dorel Banabic, 2016-10-20 This book gives a unified presentation of the research performed in the field of multiscale modelling in sheet metal forming over the course of more than thirty years by the members of six teams from internationally acclaimed universities The first chapter is devoted to the presentation of some recent phenomenological yield criteria BBC 2005 and BBC 2008 developed at the CERTETA center from the Technical University of Cluj Napoca An overview on the crystallographic texture and plastic anisotropy is presented in Chapter 2 Chapter 3 is dedicated to multiscale modelling of plastic anisotropy The authors describe a new hierarchical multi scale framework that allows taking into account the evolution of plastic anisotropy during sheet forming processes Chapter 4 is focused on modelling the evolution of voids in porous metals with applications to forming limit curves and ductile fracture The chapter details the steps needed for the development of dissipation functions and Gurson type models for non quadratic anisotropic plasticity criteria like BBC 2005 and those based on linear transformations Chapter 5 describes advanced models for the prediction of forming limit curves developed by the authors Chapter 6 is devoted to anisotropic damage in elasto plastic materials with structural defects Finally Chapter 7 deals with modelling of the Portevin Le Chatelier PLC effect This volume contains contributions from leading researchers from the Technical University of Cluj Napoca Romania the Catholic University of Leuven Belgium Clausthal University of Technology Germany Amirkabir University of Technology Iran the University of Bucharest Romania and the Institute of Mathematics of the Romanian Academy Romania It will prove useful to postgraduate students researchers and engineers who are interested in the mechanical modeling and numerical simulation of sheet metal forming processes

Multiscale Modeling and Simulation in Science Björn Engquist, Per Lötstedt, Olof Runborg, 2009-02-11 Most problems in science involve many scales in time and space. An example is turbulent flow where the important large scale quantities of lift and drag of a wing depend on the behavior of the small vortices in the boundary layer. Another example is chemical reactions with concentrations of the species varying over seconds and hours while the time scale of the oscillations of the chemical bonds is of the order of femtoseconds. A third example from structural mechanics is the stress and strain in a solid beam which is well described by macroscopic equations but at the tip of a crack modeling details on a microscale are needed. A common difficulty with the simulation of these problems and many others in physics, chemistry and biology is that an attempt to represent all scales will lead to an enormous computational problem with unacceptably long computation times and large memory requirements. On the other hand if the discretization at a coarse level ignores the fine scale information then the solution will not be physically meaningful. The influence of the fine scales must be incorporated into the model. This volume is the result of a Summer School on Multiscale Modeling and Simulation in Science held at Bosön Lidingö outside Stockholm, Sweden in June 2007. Sixty PhD students from applied mathematics, the sciences and engineering participated in the summer school.
