

## Top link adjustments

**CAUTION:** Only use the special metal lower link supplied with the tractor when connecting to the top link. Serious damage and possible injury can result if you use other types of links.

The mounting holes inside the top link should make it possible to obtain compensating angles of the implement. Use the hole most suited to match the implement to the tractor.

To adjust the mounting position of the top link, remove the left pin (1) and the top link bearing pin (2). Move the top link to the required position.

After mounting the top link in the required position, make sure that its length has been properly adjusted. For information about the length, refer to the operator's manual provided with the implement.

To adjust the length of the top link, move the adjustment handle (1) to the vertical position. Turn the handle clockwise to shorten the link or counterclockwise to lengthen the link.

## Clear and lower links (if equipped)

### Connecting an implement

Reverse the tractor until the clear ends of the lower link are aligned under the connecting points of the implement. Raise the lower link until the clear engages and implanther (1) lock. The spring spacer between the lower link will put the (1) at width setting.

### Disconnecting an implement

Lower the implement to the ground. Pull the handle to lower hole (1) equipped to release the clear and tighten and lower the lower link until clear of the implement. Move the tractor forward away from the implement.

## Telescoping lower links (if equipped)

Adjust the handle up and pull the end of the lower link out. Connect the extended lower link to the implement. The lower link will retract and lock in place when the tractor is moved forward.

**IMPORTANT:** Make sure that the lower links are fully retracted and locked in place before starting the tractor.

5

## Left hand stabilizer (Option A) (if equipped)

The stabilizer locking device is operated by an adjustable pin and spring. The spring tension can be adjusted by connecting different links of the chain to the hook on the rear left fork.

### Rigid operation

When the three point linkage is fully lowered, adjust the chain by putting a different link on the longer hook so the chain becomes loose and there is no tension in the spring. The stabilizer will be locked for rigid operation.

### Sway operation

When the three point linkage is fully lowered, adjust the chain by putting a different link on the longer hook so the chain is tight and the spring is under tension. The stabilizer will be free to sway.

When the three point linkage is raised the chain will loosen, the top bar will drop and lock the stabilizer to prevent sway during transportation.

**CAUTION:** Before beginning the transport, make sure that the stabilizer on the part of the stabilizer is completely released into its seat in the top bar.

## Left hand stabilizer (option B) (if equipped)

### Rigid operation

Insert the pin (1) through the hole (1) for rigid operation.

### Sway operation

Insert the pin (2) through the hole (2) for sway operation.

When the three point linkage is raised the stabilizer (1) will lock to prevent sway during transportation.

## Right hand stabilizer (if equipped)

### Equipped with Option A stabilizer

When the three point linkage is raised the chain will loosen, the top bar will drop and lock the stabilizer to prevent sway during transportation.

### Equipped with Option B stabilizer

When the three point linkage is raised the stabilizer (1) will lock to prevent sway during transportation.
