## Measuring Motion

## LO 2.1.1.a

As presented in this section, design effective questions for students:

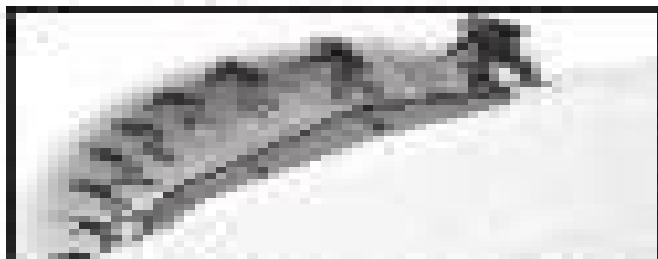

- Which instrument?
- Which motion characteristics best describe the used apparatus?
- Which measuring tool is chosen to observe this question and how is it used?

## What is Motion?

Experiments in the science of motion began to develop through the study of objects moving along linear paths. Observations related to vibrating strings and objects falling in free fall were some of the earliest examples of motion. The study of motion has been a central part of physics since its beginning.
