The Gelfand Mathematical Seminars, 1993-1995 I.M. Gelfand, James Lepowsky, Mikhail M. Smirnov, 2012-12-06 The Seminar has taken place at Rutgers University in New Brunswick New Jersey since 1990 and it has become a tradition starting in 1992 that the Seminar be held during July at IHES in Bures sur Yvette France This is the second Gelfand Seminar volume published by Birkhauser the first having covered the years 1990 1992 Most of the papers in this volume result from Seminar talks at Rutgers and some from talks at IHES In the case of a few of the papers the authors did not attend but the papers are in the spirit of the Seminar This is true in particular of V Arnold s paper He has been connected with the Seminar for so many years that his paper is very natural in this volume and we are happy to have it included here We hope that many people will find something of interest to them in the special diversity of topics and the uniqueness of spirit represented here The publication of this volume would be impossible without the devoted attention of Ann Kostant We are extremely grateful to her I Gelfand J Lepowsky M Smirnov Questions and Answers About Geometric Evolution Processes and Crystal Growth Fred Almgren We discuss evolutions of solids driven by boundary curvatures and crystal growth with Gibbs Thomson curvature effects Geometric measure theoretic techniques apply both to smooth elliptic surface energies and to non differentiable crystalline surface energies

Smooth Manifolds and Fibre Bundles with Applications to Theoretical Physics Steinar Johannesen, 2016-12-08 This book provides a systematic presentation of the mathematical foundation of modern physics with applications particularly within classical mechanics and the theory of relativity Written to be self contained this book provides complete and rigorous proofs of all the results presented within Among the themes illustrated in the book are differentiable manifolds differential forms fiber bundles and differential geometry with non trivial applications especially within the general theory of relativity The emphasis is upon a systematic and logical construction of the mathematical foundations It can be used as a textbook for a pure mathematics course in differential geometry assuming the reader has a good understanding of basic analysis linear algebra and point set topology The book will also appeal to students of theoretical physics interested in the mathematical foundation of the theories

Topics In Mathematical Physics General Relativity And Cosmology In Honor Of Jerzy Plebanski - Proceedings Of 2002 International Conference Bogdan Mielnik, Hugo Garcia-compean, Merced Montesinos, Maciej Przanowski, 2006-08-10 One of modern science s most famous and controversial figures Jerzy Plebanski was an outstanding theoretical physicist and an author of many intriguing discoveries in general relativity and quantum theory Known for his exceptional analytic talents explosive character inexhaustible energy and bohemian nights with brandy coffee and enormous amounts of cigarettes he was dedicated to both science and art producing innumerable handwritten articles resembling monk s calligraphy as well as a collection of oil paintings As a collaborator but also an antagonist of Leopold Infeld s a coauthor of Albert Einstein s Plebanski is recognized for designing the heavenly and hyper heavenly equations for introducing new variables to describe the gravitational field for the exact solutions in Einstein s

gravity and in quantum theory for his classification of the tensor of matter for some outstanding results in nonlinear electrodynamics and for analyzing general relativity with continuous sources long before Chandrasekhar et al A tribute to Pleba's contributions and the variety of his interests this is a unique and wide ranging collection of invited papers covering gravity quantization strings branes supersymmetry ideas on the deformation quantization and lesser known results on the continuous Baker Campbell Hausdorff problem

Vector Bundles in Mathematical Physics Robert Hermann,1970 The Classification of Two-dimensional Extended Topological Field Theories Christopher John Schommer-Pries,2009 Encyclopaedia of Mathematics Michiel Hazewinkel,2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques
