**Mechanics of Materials** Ferdinand Pierre Beer, E. Russell Jr Johnston, John T. Dewolf, 2009 Overview This text is designed for the first course in mechanics of materials or strength of materials offered to engineering students in the sophomore or junior year. The main objective is to help develop in the engineering student the ability to analyse a given problem in a simple and logical manner and to apply to its solution a few fundamental and well understood principles. In this text the study of the mechanics of materials is based on the understanding of a few basic concepts and on the use of simplified models. This approach makes it possible to develop all the necessary formulas in a rational and logical manner and to clearly indicate the conditions under which they can be safely applied to the analysis and design of actual engineering structures and machine components.

**Features** New and revised problems. **Hands On Mechanics** Helps the professor build in class experiments that demonstrate complicated topics in the text. The experiments and instructions are posted on [www.handsonmechanics.com](http://www.handsonmechanics.com). **McGraw Hill's ARIS Assessment Review and Instruction System** A complete online tutorial, electronic homework and course management system designed for greater ease of use than any other system available. For students ARIS contains self study tools such as animation and interactive quizzes and it enables students to complete and submit their homework online.
