 Kadereit,2012-12-06 In this volume 24 flowering plant families comprising a total of 911 genera are treated They represent
 the asterid order Lamiales except for Acanthaceae including Avicenniaceae which will be included in a later volume Although
 most of the constituent families of the order have been recognized as being closely related long ago the inclusion of the
 families Byblidaceae Carlemanniaceae and Plocospermataceae is the result mainly of recent molecular systematic research
 Keys for the identification of all genera are provided and likely phylogenetic relationships are discussed extensively To
 facilitate the recognition of relationships families are cross referenced where necessary The wealth of information contained
 in this volume makes it an indispensable source for anybody in the fields of pure and applied plant sciences Mergent
