Your First Parametric Designs in Autodesk® Inventor® 2020 Fabian Stasiak, 2019-04-04 This manual is intended for people for whom this is the first contact with Autodesk Inventor software However individuals who are familiar with the program will find here useful information about using parameterization techniques for the streamline creation of variants of the product In this manual you will find extensive descriptions and detailed illustrations explaining the tools used and the correct workflow techniques The book presents three examples of the use of parameterization Example No 1 Designing a complete product In the first example you will learn how to work in Inventor from scratch You will create a project of a simple drill vise on which you will learn the basic operations of modeling and creating drawing documentation This example emphasizes the principles of project management from a single part through designing parts in the context of the assembly checking the basic kinematics of the product and further creating a complete drawing documentation containing item numbers and a parts list as well as an exploding view of the product rendered illustration and video Then thanks to the program parameterization and skillful file management you will quickly create a new version of the drill vise with a complete set of drawing documentation as well as a rendered illustration and video of the new version of the product Example No 2 Component libraries Most of the products being designed use components purchased from external suppliers For this reason parametric 3D models of purchased components which can be quickly inserted into the project instead of modeling each time from scratch offer the greatest possible convenience for the constructor In addition component library files should be properly described so that they are correctly presented in the bill of materials and also it should be placed in the library resources area which will protect them from accidental editing The examples presented here will teach you how to prepare your own parametric libraries of purchased components Example No

3 The parametric generator of product versions In the third example you will create a parametric generator for making a simple metal casing that allows you to obtain a model of any size with or without handles and pre prepared drawing documentation for each version The generated version of the casing can be further modified in order to obtain the final appearance In this example you will learn the basics of designing sheet metal parts the use of parameters in parts and in the assembly and you will learn the basics of programming using iLogic and how to use iLogic parametric version generators And No additional files for download are required to complete the designs described all files will be created from scratch in the exercises in sequence Most of this manual is also compatible with previous versions of Inventor
