Sustainable Energy Systems: From Primary to End-Use João Carlos de Oliveira Matias, Leonel Jorge Ribeiro Nunes, Radu Godina, 2019-09-03 This book focuses on sustainable energy systems While several innovative and alternative concepts are presented the topics of energy policy life cycle assessment thermal energy and renewable energy also play a major role Models on various temporal and geographical scales are developed to understand the conditions of technical as well as organizational change New methods of modeling which can fulfil technical and physical boundary conditions and nevertheless consider economic environmental and social aspects are also developed *Materials Selection for Sustainability in the Built Environment* Assed N. Haddad, Ahmed W.A. Hammad, Karoline Figueiredo, 2024-02-13 Materials Selection for Sustainability in the Built Environment Environmental Social and Economic Aspects presents the current state of the art when it comes to the decision making process for choosing construction materials to deliver sustainable construction projects Aspects covered include the science of enhanced decision making via operational research and machine learning techniques and how this can be implemented in various disciplines such as architecture engineering and construction To this end the book discusses environmental economic and social aspects in assessing construction materials and presents different tools and methods that can benefit and facilitate this process Finally the book reviews previous publications on construction material selection and presents essential discussions on the role professionals researchers contractors and governments play in making more sustainable decisions on the built environment Presents a lifecycle management based systematic and integrated approach for sustainable construction materials selection Discusses the impact of materials selection covering every aspect of sustainability environmental social and economic aspects Looks at the concept of the circular economy Provides case studies on decision making methods in combination with lifecycle sustainability assessments **Insect Microbiome: From Diversity To Applications** George Tsiamis, Brian Weiss, Adly M. M. Abdalla, 2023-03-21 Insects are by far the most diverse and abundant animal group with respect to the number of species globally in ecological habitats and in biomass The ecological and evolutionary success of insects depends in part on their countless relationships with beneficial microorganisms which are known to influence all aspects of their physiology ecology and evolution These symbiotic associations are known to a enhance nutrient poor diets b aid digestion of recalcitrant food components c protect from predators parasites and pathogens d contribute to inter and intraspecific communication e affect efficiency as disease vectors and f govern mating and reproductive systems Characterization exploitation and management of the insect bacterial symbiotic associations can contribute significantly to the control of agricultural pests and disease vectors Insects that depend exclusively on nutritionally restricted diets such as plant sap vertebrate blood and woody material commonly possess obligate mutualistic endosymbionts involved in the provision of essential nutrients or in the degradation of food materials These intracellular mutualists commonly have the following biological features a they localize inside

bacteriocytes b are essential for fitness c are maternally transmitted and d display strict host symbiont co evolutionary patterns In addition to obligate endosymbionts many insects harbor bacteria that are not essential for their survival or fecundity and are typically maintained with a patchy distribution in host populations Such symbionts can induce reproductive phenotypes in insect hosts including male killing feminization parthenogenesis or cytoplasmic incompatibility Because these bacteria manipulate their host s reproductive biology they also likely accelerate host processes As for essentially all animals microbial communities are particularly prominent in the digestive tract where they may be key mediators of the varied lifestyles of insect hosts The contribution of microorganisms particularly gut microorganisms to insect function is highly relevant from several perspectives linking to applications in medicine agriculture and ecology Gut associated microorganisms can include protists fungi archaea and bacteria but it is generally accepted that bacterial species dominate the microbial community in the guts of most insects Gut associated bacteria can influence a vectoring efficiency b developmental time c decomposition of plant biomass and carbon cycle d nitrogen fixation and nitrogen cycle e mating incompatibilities and f detoxification of pesticides leading to the acquisition of insecticide resistance

**Water use efficiency of arable and grassland crops in legume-based intercropping systems** Annika Meißner,2021 Legume based intercropping systems have the potential for a more efficient use of water resources This depends on various factors such as environmental conditions and genotypic characteristics Therefore several genotypes of legumes and non legumes of arable grassland and woody crops were tested comparing intercropping and pure stands under both greenhouse and field conditions Greenhouse experiments with winter faba bean and winter wheat under water deficit revealed genotypic differences in the suitability for intercropping as well as effects on the microbial community Field experiments with direct and remote measurements showed that including legumes in arable and grassland low input systems improves water use efficiency and productivity in comparison to pure non legumes The grassland mixing partners perennial ryegrass and chicory had additional effects Furthermore arable intercropping reduced nitrous oxide emissions compared to fertilized wheat stands From the consolidated results some winter faba bean and white clover genotypes could be identified for further breeding for intercropping systems In summary intercropping with legumes improves the water use efficiency and the general performance and sustainability of the agro ecosystem

**Earth and Environmental Sciences** Imran Ahmad Dar,Mithas Ahmad Dar,2011-12-07 We are increasingly faced with environmental problems and required to make important decisions In many cases an understanding of one or more geologic processes is essential to finding the appropriate solution Earth and Environmental Sciences are by their very nature a dynamic field in which new issues continue to arise and old ones often evolve The principal aim of this book is to present the reader with a broad overview of Earth and Environmental Sciences Hopefully this recent research will provide the reader with a useful foundation for discussing and evaluating specific environmental issues as well as for developing ideas for problem solving The book has been divided into nine sections
