**Examiner Consistency of Assigning Manual Muscle Testing Grades** Michelle Menard,Gretchen Peterson,Elizabeth Spadafora,Kerry Spinale,1998 Abstract BACKGROUND AND PURPOSE Manual muscle testing is the most commonly used procedure to assess patient strength The purpose of this study was to determine the consistency in which physical therapists assign manual muscle testing grades SUBJECTS The subjects were 38 volunteer physical therapists from various clinical settings All subjects had at least two years of clinical experience METHODS AND MATERIALS Subjects were instructed to apply either minimum moderate or maximum pressure which corresponded to assigning a grade of fair plus good or normal according to the Kendall system respectively The pressure was applied through the Nicholas Manual Muscle Tester to the right hip flexor muscle group of the researcher A retest was performed approximately two weeks following the initial test STATISTICAL ANALYSES The absolute value of the difference between the initial test and retest was used to compare consistency of each subject Paired samples t tests were used to test for differences from the initial test to retest for each force level A 2 X 3 repeated measures analysis of variance ANOVA was used to compare force means among force levels and

between test days The standard error of the measure SEM was calculated to estimate the precision of measurement made by examiners at each force level and test day RESULTS No significant difference was found between the initial test and retest for any of the force levels Inconsistencies were found between the initial test and retest for each subject at each force level Inconsistencies in the amount of applied pressure were found between subjects at each force level Subjects were found to be the most inconsistent when applying maximum pressure CONCLUSION Clinicians were unable to reproduce the same force from initial test to retest Clinicians also varied in the amount of pressure they perceived as minimum moderate and maximum RELEVANCE Inconsistencies in assigning grades exist therefore manual muscle testing may not be the most clinically useful measurement of strength **Daniels and Worthingham's Muscle Testing E-Book** Marybeth Brown,Dale

**NeuroKinetic Therapy** David Weinstock, 2012-06-05 NeuroKinetic Therapy is based on the premise that when an injury has occurred certain muscles shut down or become inhibited forcing other muscles to become overworked This compensation pattern can create pain or tightness By applying light pressure that the client then resists the practitioner can evaluate the strength or weakness of each muscle revealing the sources of injury and retraining the client's body to remove the compensation patterns reprogramming the body at the neural level This easy to follow practitioner's manual presents a series of muscle tests specially designed to uncover and resolve compensation patterns in the body Author David Weinstock begins by explaining how this approach stimulates the body and mind to resolve pain Organized anatomically each section of the book includes clear photographs demonstrating correct positioning of the muscle accompanied by concise explanations and instructions Labeled anatomical illustrations appear at the end of each section showing the relationships between the muscles and muscle groups This essential resource is especially useful for physical therapists chiropractors orthopedists and massage therapists looking for new ways to treat underlying causes of pain
