

DESCRIPTION

The desired engine speed is selected by means of the hand throttle (A) or foot throttle (D). The position of these levers controls – through the governor on the fuel injection pump – the amount of fuel being injected into the cylinders.

The hand throttle is self-locking: Two spring-loaded friction disks (B) hold the lever in the position selected.

With engine running at slow idle speed, hand throttle lever (A) lies against stop screw (C).

If hand throttle lever is pushed forward until speed control lever lies against forward stop on pump, the engine runs at fast idle speed.

The engine is stopped by means of a shut-off cable. One end of this cable is connected to the fuel injection pump lever, the other to a knob in the dash.

A—Hand shoghtle
B—Friction disks

C—Stop screw
D—Foot throttle

NOTE: The illustration shows speed control linkage of a tractor equipped with SG2 cab.
