Academic Journal: Editing and Publishing Radhakrishnan Nair, 2017-11-29 World University rankings were announced by Thomas Reuters and The Times. As an Indian, besides being one teaching for nearly five decades, I was eager to know the results of the announcement. I showed enough concern: Where have our good Indian universities, higher educational institutions been placed? I set my eyes on top ranks and it didn't give me anything to be proud of. My eyes crossed over more than two hundred and fifty names of universities of the world, including those of some not so developed countries. But I came across no name of Indian institutions/universities. This upsets me. What made the Indian educational scenario virtually get eclipsed by the scenarios of the rest of the world? I drew a comparison between the higher education in India with that of many other countries. The World Education scene, in general, occupied a higher level of degree in research and publication than that of the Indian Education scene. Research flourishes when research is brought to light through publication. I always advocate sound growth in Indian Education. This can be achieved if we improve journal publication. This awareness has resulted in this book. Therefore, Journal Publishing is a Cultural Imperative. This book is designed to help readers understand what a journal is, the people who are responsible for the creation and production of this journal, how a journal is published, where a journal flourishes, and why it is mandatory in education development. I have taken materials from all over the world, and all these sources have been acknowledged in the references, but for them, this book would not have been a reality.

Springer Handbook of Science and Technology Indicators Wolfgang Glänzel, Henk F. Moed, Ulrich Schmoch, Mike Thelwall, 2019-10-30 This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system. Focusing on various aspects of the development and application of indicators derived from data on scholarly publications, patents, and electronic communications, the individual chapters, written by leading experts, discuss theoretical and methodological issues, illustrate applications, highlight their policy context and relevance, and point to future research directions. A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources, presenting both traditional and advanced approaches. It addresses the main bibliographic metrics and indexes such as the journal impact factor and the h index, as well as altmetric and webometric indicators, and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance, as well as their impact on research policy and society. It also presents and critically discusses various national research evaluation systems. Complementing the sections reflecting on the science system, the technology section includes

multiple chapters that explain different aspects of patent statistics patent classification and database search methods to retrieve patent related information In addition it examines the relevance of trademarks and standards as additional technological indicators The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners scientists and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance
