A Contemporary Theory of Mathematics Education Research Tony Brown, 2020-10-05 This book by passes both psychology and sociology to present an original social theory centered on seeing mathematical learning by everyone as an intrinsic dimension of how mathematics develops as a field in support of human activity Here mathematics is defined by how we collectively talk about it Drawing on psychoanalytic theory the student is seen as participating in the renewal of mathematics through their contributions to our collective gaze on mathematics as the field responds to ever new demands As such learning takes a critical stance on the standard initiations into current practices often promoted by formal education In the field of mathematics education researchers have moved from psychology where individual students were seen as following natural paths of development through existing mathematical knowledge to socio cultural models predicated on students being initiated into the human world and understood through the reflective gazes this world has of itself such as those found in comparisons of student learning in different countries This book addresses the domain purpose and functioning of

contemporary research in mathematics education and is an original contribution to this theme The book is aimed at a mathematics education research audience It continues a dialogue with existing publications seen widely as a cutting edge and will also be of interest to students and practitioners in the fields of qualitative research social theory and psychology

Knowing and Teaching Elementary Mathematics Liping Ma, 2010-03-26 Studies of teachers in the U S often document insufficient subject matter knowledge in mathematics Yet these studies give few examples of the knowledge teachers need to support teaching particularly the kind of teaching demanded by recent reforms in mathematics education Knowing and Teaching Elementary Mathematics describes the nature and development of the knowledge that elementary teachers need to become accomplished mathematics teachers and suggests why such knowledge seems more common in China than in the United States despite the fact that Chinese teachers have less formal education than their U S counterparts The anniversary edition of this bestselling volume includes the original studies that compare U S and Chinese elementary school teachers mathematical understanding and offers a powerful framework for grasping the mathematical content necessary to understand and develop the thinking of school children Highlighting notable changes in the field and the author s work this new edition includes an updated preface introduction and key journal articles that frame and contextualize this seminal work

 Quality in Mathematics Education* Murad Jurdak,2009-07-30 Educational equity and quality are not only research issues
 which cut across different disciplines but are major determinants of socio economic and human development in both
 industrial and developing countries The status and role of mathematics a subject which has long enjoyed a privileged status
 in school curricula worldwide due to its perceived role in science and technology render equity and quality in mathematics
 education at the heart of human development This is reflected by governments relatively large investments in improving the
 quality of mathematics education and extending it to marginalized and underprivileged groups The purpose of *Toward Equity in
 Quality in Mathematics Education* is four fold First the book examines the constructs of equity and quality and their
 interdependence from different perspectives Second it develops a conceptual framework for studying and analyzing the two
 constructs Third it examines consolidates and re structures the literature on equity and quality in mathematics education
 Finally using data from TIMSS 2003 the book investigates the within and across country impact of the different equity
 related factors on mathematics achievement in a sample of countries representative of worldwide geographical and cultural
 regions Towards Equity in Quality in Mathematics Education uses a multi dimensional conceptual framework to study and
 analyze issues in equity and quality The framework consists of five perspectives hypothesized as determinants of equity in
 quality in mathematics education Mathematical societal educational ideological and genetic The framework can be thought of
 as a pyramid with mathematics as its base and the societal educational ideological and genetic perspectives as its faces Thus
 each point within this pyramid represents a unique equity in quality situation i e with different coordinates with respect to
