Evolutionary Psychology William J. Ray, 2012-01-17 Many books in evolutionary psychology emphasize just a small part of the total picture William J Ray s book gives students a clear understanding of how current psychological knowledge of human behavior and experience draws from a variety of perspectives It begins with an understanding of evolution and the close connection between organisms and their environment focusing on how the environment and genes can influence humans and the cultures of which they are a part Using current research in social processes decision making and brain imaging Ray explores how humans solve certain life problems in the same way that many non human species do He also highlights human abilities not seen in other species including our ability to use language develop culture and create writings and art that can influence other humans thousands of years later Written in a clear easy to understand manner the book emphasizes developmental processes and family relationships sexual and social relationships and emotionality and language It concludes with an examination of health and disease psychopathology and culture all seen through an evolutionary lens

Adapting Minds David J. Buller, 2006-02-17 Was human nature designed by natural selection in the Pleistocene epoch The dominant view in evolutionary psychology holds that it was that our psychological adaptations were designed tens of thousands of years ago to solve problems faced by our hunter gatherer ancestors In this provocative and lively book David Buller examines in detail the major claims of evolutionary psychology the paradigm popularized by Steven Pinker in *The Blank Slate* and by David Buss in *The Evolution of Desire* and rejects them all This does not mean that we cannot apply evolutionary theory to human psychology says Buller but that the conventional wisdom in evolutionary psychology is misguided Evolutionary psychology employs a kind of reverse engineering to explain the evolved design of the mind figuring out the adaptive problems our ancestors faced and then inferring the psychological adaptations that evolved to solve them In the carefully argued central chapters of *Adapting Minds* Buller scrutinizes several of evolutionary psychology's most highly publicized discoveries including discriminative parental solicitude the idea that stepparents abuse their stepchildren at a higher rate than genetic parents abuse their biological children Drawing on a wide range of empirical research including his own large scale study of child abuse he shows that none is actually supported by the evidence Buller argues that our minds are not adapted to the Pleistocene but like the immune system are continually adapting over both evolutionary time and individual lifetimes We must move beyond the reigning orthodoxy of evolutionary psychology to reach an accurate understanding of how human psychology is influenced by evolution When we do Buller claims we will abandon not only the quest for human nature but the very idea of human nature itself

The Journal of Comparative Neurology and Psychology, 1910 Applied Evolutionary Psychology S. Craig Roberts, 2011-11-24 Human behaviour is marvellous in its complexity variability and unpredictability Understanding it however is not solely the role of psychologists everyone has a vested interest in it from individuals to organisations and industry Recently biologists and psychologists have had considerable success incorporating insights from evolutionary theory to help them understand some fundamental psychological issues in a discipline now known as evolutionary psychology However to date these useful insights have not been widely applied to tackle specific practical problems or issues in society This innovative new book kick starts this process It provides a foundation for an incipient focus on applications of evolutionary research It draws together a collection of renowned academics from a disparate set of fields whose common interest lies in using evolutionary thinking to inform their research Topics range from reviews of evolutionary perspectives on adult and family relationships insights into business economics and marketing health and interactions with technology and the media through to major global and societal issues such as promoting green behaviour cooperation and public health and tackling crime terrorism and prejudice No other book has focused as specifically and with such broad scope on the applications of modern evolutionary psychology While the rapidly growing number of books on evolutionary psychology succeed in describing current theoretical thinking illustrated and supported by empirical studies this book uses this established basis as a backdrop and starting point for a more focused exploration of practical application This groundbreaking book will be valuable for students and researchers in evolutionary and applied psychology as well as biology and anthropology
