The Impact of Participation in Publicly Funded R&D Projects on Firm Competitiveness: Benefits and Barriers to the Use of National and EU Funding Programmes on the Example of Swiss SMEs in the Field of Renewable Energy Manuel Kaar, Jeanette Müller, 2011-03-30 Inhaltsangabe Introduction Never before in history has global demand for energy been stronger than today While exhaustible resources such as oil gas and coal are expected to remain the world's primary basis of energy generation in the near future alternative resources like biomass solar or wind energy are predicted to grow significantly in importance e.g. International Energy Agency 2009 The strong global energy demand together with rising costs of finding and exploiting fossil fuels has contributed to a considerable increase in public awareness for the energy supply issue in recent years and thus also to an acceleration of the investments and developments in the field of alternative resources Yet in order to achieve a fundamental shift away from exhaustible resources on a long term basis creative innovations and new technology solutions for renewable energy production are vital The basis for the successful development and commercialisation of such new technologies is

effective research and development R D work by companies universities and other organisations Small and medium sized enterprises SMEs take on a special role in this respect The majority of European companies are SMEs if measured by the EU criteria EC DG Research Communication Unit 2010a p 6 that is they have less than 250 employees and an annual turnover and or balance sheet total lower than EUR 50 million and or EUR 43 million respectively The large number of SMEs in Europe implies that there is a high diversity and thus also a vast potential for innovation in these organisations Nevertheless in most countries including Switzerland the bulk of research in the private sector is undertaken by larger businesses In Switzerland R D by SMEs SFSO definition i e firms with less than 100 employees accounted for only 16% of total in house R D spending in 2008 although some 99% of Swiss companies are categorised as SMEs SFSO 2010 p 9 In addition many smaller companies do not engage in R D at all as they simply do not possess the necessary resources These facts lead to a situation where much potential for innovation in smaller firms remains unused Providing SMEs with the opportunity to engage in publicly funded R D projects offers one way to tap into this potential for innovation that would otherwise continue to lie idle and is therefore highly reasonable from a policy point of view At the same time participation in such projects

ENTANGLEMENT AND CLARIFICATION OF REASON AND MATHEMATICS DONG QIU,2024-12-30 Socio economic empirical analysis must borrow mathematical tools but only focusing on mathematics and ignoring the underlying reason of phenomena can easily lead to hypothetical analysis which formally meets the standards but loses the soul of quantitative research This book emphasizes the eternal mission of scholars in the process of empirical analysis which is to distinguish between mathematics and reason and to clarify the two entangled in phenomena The first part is a systematic monograph the second part is a reading note on the relationship between mathematics and reason the third part is the essay of one matter one reason and the fourth part is the author s early thinking on the relationship between mathematics and reason which still serves as a warning to this day As the fifth book of Criticism Series of Contemporary Economic Statistics it applies to the same audience as the first four books This book incorporates the author s insights and experiences from reading and traveling and may serve as a teaching reference for graduate and undergraduate students to enhance the flexibility of statistical learning Many people believe that economic statistics are only for quantitative analysis but upon closer examination the focus is on the degree of phenomena that is measurement **Mind on Statistics** Jessica M.
