Instructions: Use a graphing calculator to answer the questions below. Round all answers to the nearest hundredth.

1. A fast-food restaurant owner notices that drink sales are higher on warmer days. He compiled the drink sales data in the table below.

- a) Determine a linear equation that best models the data.

$y =$ _____

- b) Use the equation to predict drink sales if the temperature is 85°F.

High Temperature (°F)	Number of Drinks Sold
55	350
64	410
69	440
73	450
75	410
83	740

2. To determine the age of a tree, foresters use a linear model relating age to the diameter of the tree trunk.

- a) Determine a linear equation that best models the data.

$y =$ _____

- b) Use the equation to estimate the age of a tree whose trunk diameter is 14 in.

Diameter (in.)	Age (yr.)
2.5	16
4	25
6	36
8	52
9.5	78
15	85

3. Maggie is studying the sales of her company. The table shows the total sales each year for 5 years.

- a) Determine a linear equation that best models the data.

$y =$ _____

- b) Use the equation to predict the sales in the year 2030.

Year	Sales (in millions)
2010	300
2011	304
2012	280

Dissertation Abstracts International ,1980 Threshold Concepts in Practice Ray Land, Jan H. F. Meyer, Michael T. Flanagan, 2016-07-09 Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice and the learning experiences of their students through the lens of the Threshold Concepts Framework In any discipline there are certain concepts the jewels in the curriculum whose acquisition is akin to passing through a portal Learners enter new conceptual and often affective territory Previously inaccessible ways of thinking or practising come into view without which they cannot progress and which offer a transformed internal view of subject landscape or even world view These conceptual gateways are integrative exposing the previously hidden interrelatedness of ideas and are irreversible However they frequently present troublesome knowledge and are often points at which students become stuck Difficulty in understanding may leave the learner in a liminal state of transition a betwixt and between space of knowing and not knowing where understanding can approximate to a form of mimicry Learners navigating such spaces report a sense of uncertainty ambiguity paradox anxiety even chaos The liminal space may equally be one of awe and wonderment Thresholds research identifies these spaces as key transformational points crucial to the learner's development but where they can oscillate and remain for considerable periods These spaces require not only conceptual but ontological and discursive shifts This volume the fourth in a tetralogy on Threshold Concepts discusses student experiences and the curriculum interventions of their teachers in a range of disciplines and professional practices including medicine law engineering architecture and military education Cover image Detail from Eve offering the apple to Adam in the Garden of Eden and the serpent c 1520 25 Lucas Cranach the Elder 1472 1553 Bridgeman Images All rights reserved

Cognitive and Psychometric Analysis of Analogical Problem Solving Isaac I. Bejar, Roger Chaffin, Susan E. Embretson, 1991 If one were to conduct an analysis of any profession the ability to think analogically is more than likely to be one of the requirements for success be it an architectural studio a research laboratory a legal office or a nuclear plant Cognitive scientists are aware of the prominence of analogical reasoning in all forms of reasoning and learning and have devoted substantial effort to ascertaining its nature Test builders like cognitive scientists are aware of the centrality of analogical reasoning and figure correctly that a test that

samples a student's ability to think analogically may well be a good predictor of success in a variety of fields. This book is the result of a project to investigate analogical reasoning from both an individual differences and a cognitive perspective. The book is directed to both researchers and practitioners concerned with the nature and measurement of analogical reasoning. Cognitive scientists, linguists, psycholinguists, and natural language researchers will find the semantic taxonomy and accompanying empirical results food for thought. Test developers will find it reassuring that performance on verbal analogy items is not just a reflection of the size of a person's vocabulary and that tests can be designed according to principles rather than assembled to satisfy a set of statistical specifications. Psychometricians will find that content and response modelling can go together and that there are distinct benefits in approaching psychometric response modelling from that integrative perspective.
