

# Calculating limiting reactants.

Let's look at an example:

In this reaction, 56 g nitrogen gas ( $\text{N}_2$ ) was added to a chamber containing 14 g hydrogen gas ( $\text{H}_2$ ). Which was the limiting reactant? ( $A_r$ :  $\text{H}=1$ ,  $\text{N}=14$ )

*Steady and Unsteady State Balances* American Institute of Chemical Engineers, 1987      *Chemistry* Eugene LeMay, Jr., Herbert Beall, Karen M. Robblee, Douglas C. Brower, Prentice-Hall Staff, 2002-02      Chemical Process Robin Smith, 2005-06-10 This book deals with the design and integration of chemical processes emphasizing the conceptual issues that are fundamental to the creation of the process Chemical process design requires the selection of a series of processing steps and their integration to form a complete manufacturing system The text emphasizes both the design and selection of the steps as individual operations and their integration Also the process will normally operate as part of an integrated manufacturing site consisting of a number of processes serviced by a common utility system The design of utility systems has been dealt with in the text so that the interactions between processes and the utility system and interactions between different processes through the utility system can be exploited to maximize the performance of the site as a whole Chemical processing should form part of a sustainable industrial activity For chemical processing this means that processes should use raw materials as efficiently as is economic and practicable both to prevent the production of waste that can be environmentally harmful and to preserve the reserves of raw materials as much as possible Processes should use as little energy as economic and practicable both to prevent the build up of carbon dioxide in the atmosphere from burning fossil fuels and to preserve reserves of fossil fuels Water must also be consumed in sustainable quantities that do not cause deterioration in the quality of the water source and the long term quantity of the reserves Aqueous and atmospheric emissions must not be environmentally harmful and solid waste to landfill must be avoided Finally all aspects of chemical processing must feature good health and safety practice It is important for the designer to understand the limitations of the methods used in chemical process design The best way to understand the limitations is to understand the derivations of the equations used and the assumptions on which the equations are based Where practical the derivation of the design equations has been included in the text The book is intended to provide a practical guide to chemical process design and integration for undergraduate and postgraduate students of chemical engineering practicing process designers and chemical engineers and applied chemists working in process development Examples have been included throughout the text Most of these examples do not require specialist software and can be performed on spreadsheet software Finally a number of exercises have been added at the end of each chapter to allow the reader to practice the calculation procedures      **Chemistry in the Natural World** Roger G. Gymer, 1977      Research and Development in Progress, 1973      Modelling and Numerical Simulations II Mordechai Schlesinger, 2009-08-15 The present volume is the second in a two volume set dealing with modelling and numerical simulations in electrochemistry Emphasis is placed on the aspect of nanoelectrochemical issues It seems appropriate at this juncture to mention the n growing body of opinion in some circles that George Box was right when he stated three decades ago that All models are wrong but some are useful Actually when the statement itself was made it would

have been more appropriate to say that All models are inaccurate but most are useful nonetheless At present however the statement as it was made is far more appropriate and closer to the facts than ever before Currently we are in the midst of the age of massively abundant data Today s philosophy seems to be that we do not need to know why one piece of information is better than another except through the statistics of incoming and outgoing links between information and this is good enough It is why both in principle and in practice one can translate between two languages without knowledge of either While none of this can be ignored and it may even be true that All models are wrong and increasingly you can succeed without them the traditional approach of scientific modelling is still the order of the day That approach may be stated as hypothesize measure model test It is in this light that the present volume should be viewed
