Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated module has taken the place of the control unit. Instead of a hydraulic controller, a computer electronic controller is used. It has a very powerful microcontroller system, all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a control unit that is specifically adapted to the truck.

Troubleshooting

The processor of the electronic control unit analyzes analog and digital signals. The processor recognizes digital signals and system errors, and displays an error message on the display module on the control unit. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Flashing indicator of the internal communication system
- The truck brakes with automatic brake system and all the lights flash
- The truck brakes in the emergency function, the internal communication system activates off
- An error code appears on the display

These functions can be activated by switching off the communication system with the key switch. During a repair, the control unit shows whether the error is still present. If the error is no longer present, the truck electronic control system. If the error persists, the error code appears on the display and one of the measures taken should be taken.

Changing the controller

4.1.1.1.1.1.1

Problems regarding component damage due to electronic discharge. Component damage is resulting elements will cause if the controller is changed.

The controller is equipped with a "flop" plug, which is attached to the back of the control unit. Communication lines pass via this plug. The upper part of the plug and the software version of the controller can be read out via the back connector.

If the controller is replaced, the previous control unit controller must be identified and plug adapted to the cable harness. All necessary information is available on the cable harness.
