Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated module has taken the place of the control unit. Instead of a hydraulic controller, a computer electronic controller is used with a very powerful microcontroller system. It controls functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a coding that uniquely identifies the truck.

Troubleshooting

The processor of the electronic control unit analyzes analogue and digital signals. The processor recognizes digital malfunctions and system errors, and displays an error message on the display/monitor on the control interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Flashing indicator of the internal communication system
- The truck brakes with automatic brake activation and off the engine brake
- The main battery (as the emergency) function, the internal communication system activates off
- An error code appears on display

These functions can be activated by switching off the communication system with the key switch. During a repair, the control unit stores whether the error is still present. If the error is no longer present, the truck displays normal operation. If the error persists, the error code reappears on the display and one of the measures listed above is carried out.

Changing the controller

⚠ Warning

Prohibit independent component storage due to electrostatic discharge. Independent storage is hazardous and can cause a fire if the controller is stored.

The controller is equipped with a "fingerprint" which is attached to the truck's main wiring harness. Communication takes place via CAN bus. The system unit number and the software version of the controller can be read out via the main diagnostic.

📖 Note

If the controller is replaced, the permitted spare part controller must be identified and only adapted to the code function. All necessary information is available on the code function.
