Levesque, 1999-06-07 It is a pleasure and an honor to be able to present this collection of papers to Ray Reiter on the occasion of his 60th birthday To say that Ray s research has had a deep impact on the field of Artificial Intel ligen ce is a considerable understatement Better to say that anyone thinking of do ing work in areas like deductive databases default reasoning diagnosis reasoning about action and others should realize that they are likely to end up proving corol laries to Ray s theorems Sometimes studying related work makes us think harder about the way we approach a problem studying Ray s work is as likely to make us want to drop our way of doing things and take up his This is because more than a mere visionary

Ray has always been a true leader. He shows us how to proceed not by pointing from his armchair but by blazing a trail himself setting up camp and waiting for the rest of us to arrive. The International Joint Conference on Artificial Intelligence clearly recognized this and awarded Ray its highest honor the Research Excellence award in 1993 before it had even finished acknowledging all the founders of the field. The papers collected here sample from many of the areas where Ray has done pioneering work. One of his earliest areas of application was databases and this is reflected in the chapters by Bertossi et al and the survey chapter by Minker.
