

Geometry: Lines and Angles

Line and Angle terminology

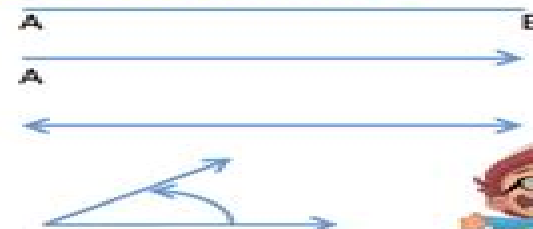

A **line segment** has two end points and a definite length

A **ray** has a beginning, but no end point

A **straight line** has no beginning or end point and no definite length.

Where two lines or rays meet or cross, they form an **angle**.

An **angle** is an amount of rotation. It is measured in **degrees**.

Types of angles

Name of angle	Example	Size of angle
Acute angle I am so cute and small and never go past 90°		Between 0° and 90°
Right angle I am always right and form a perfect 90° angle with another line.		Equal to 90°
Obtuse angle I am a lot more relaxed than the right angle and is OB viously bigger than 90° !		Between 90° and 180°
Straight line I like to walk the straight and narrow line and never go anywhere but 180° .		Equal to 180°
Reflex angle I am very flexible and can bend all way past 180° .		Between 180° and 360°
Revolution/angles around a point I like to be different. Let's start a revolution and dance around a circle!		Equal to 360°
