Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated module has taken the place of the control unit. Instead of a hydraulic controller, a computer electronic controller is used. It has a very powerful microcontroller system, all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a control unit that is specifically adapted to the truck.

Troubleshooting

The processor of the electronic control unit analyzes analog and digital signals. The processor recognizes digital malfunctions and system errors, and displays an error message on the display/monitor on the control interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Flashing indicator of the internal communication system
- The truck brakes with automatic brake activation and off the engine brake
- The main battery (in the emergency function) the internal communication system activates off
- An error code appears on the display

These functions can be activated by switching off the communication system with the key switch. During a restart, the control unit shows whether the error is still present. If the error is no longer present, the truck electronic control system. If the error persists, the error code appears on the display and one of the measures taken should be taken.

Changing the controller

4.1.1.1.1.1.1

Problems regarding component damage due to electrostatic discharge. Electrostatic damage is nothing dangerous and does not cause if the controller is covered.

The controller is equipped with a "fingerprint" which is attached to the truck's main control system. Communication takes place via the bus. The control unit number and the software version of the controller can be read out via the bus interface.

4.1.1.1.1.1.1

If the controller is replaced, the personal work unit controller must be identified and the data adapted to the truck's hardware. All necessary information is available on the truck's control.
