Handbook of Global Optimization R. Horst, Panos M. Pardalos, 2013-12-11 Global optimization is concerned with the computation and characterization of global optima of nonlinear functions During the past three decades the field of global optimization has been growing at a rapid pace and the number of publications on all aspects of global optimization has been increasing steadily Many applications as well as new theoretical algorithmic and computational contributions have resulted The Handbook of Global Optimization is the first comprehensive book to cover recent developments in global optimization Each contribution in the Handbook is essentially expository in nature but scholarly in its treatment The chapters cover optimality conditions complexity results concave minimization DC programming general quadratic programming nonlinear complementarity minimax problems multiplicative programming Lipschitz optimization fractional programming network problems trajectory methods homotopy methods interval methods and stochastic approaches The Handbook of Global Optimization is addressed to researchers in mathematical programming as well as all scientists who use optimization methods to model and solve problems

Perspectives in Computational Complexity Manindra Agrawal, Vikraman Arvind, 2014-07-16 This book brings together contributions by leading researchers in computational complexity theory written in honor of Somenath Biswas on the occasion of his sixtieth birthday They discuss current trends and exciting developments in this flourishing area of research and offer fresh perspectives on various aspects of complexity theory The topics covered include arithmetic circuit complexity lower bounds and polynomial identity testing the isomorphism conjecture space bounded computation graph isomorphism resolution and proof complexity entropy and randomness Several chapters have a tutorial flavor The aim is to make recent research in these topics accessible to graduate students and senior undergraduates in computer science and mathematics It can also be useful as a resource for teaching advanced level courses in computational complexity

Algorithms for the Solution of Systems of Linear Diophantine Equations Joseph Tsu-wu Chou, 1979

Introduction to Numerical Ordinary and Partial Differential Equations Using MATLAB Alexander Stanoyevitch, 2011-10-14

Power System Modelling and Scripting Federico Milano, 2010-09-08 Power system modelling and scripting is a quite general and ambitious title Of course to embrace all existing aspects of power system modelling would lead to an encyclopedia and would be likely an impossible task Thus the book focuses on a subset of power system models based on the following assumptions i devices are modelled as a set of nonlinear differential algebraic equations ii all alternate current devices are operating in three phase balanced fundamental frequency and iii the time frame

of the dynamics of interest ranges from tenths to tens of seconds These assumptions basically restrict the analysis to transient stability phenomena and generator controls The modelling step is not self sufficient Mathematical models have to be translated into computer programming code in order to be analyzed understood and experienced It is an object of the book to provide a general framework for a power system analysis software tool and hints for filling up this framework with versatile programming code This book is for all students and researchers that are looking for a quick reference on power system models or need some guidelines for starting the challenging adventure of writing their own code
