Ensuring Innovation in Diagnostics for Bacterial Infection Morel C., McClure L., Edwards S., Goodfellow V., Sandberg D., Thomas J., 2016-04-18 The inappropriate use of antibiotics is a primary cause of the ongoing increase in drug resistance amongst pathogenic bacteria The resulting decrease in the efficacy of antibiotics threatens our ability to combat infectious diseases Rapid point of care tests to identify pathogens and better target the appropriate treatment could greatly improve the use of antibiotics Yet there are few such tests currently available or being developed despite the rapid pace of medical innovation Clearly something is inhibiting the much needed development of new and more convenient diagnostic tools This study delineates priorities for developing diagnostics to improve antibiotic prescription and

use with the goal of managing and curbing the expansion of drug resistance It calls for new approaches particularly in the provision of diagnostic devices and in doing so outlines some of the inadequacies in health science and policy initiatives that have led to the dearth of such devices The authors make the case that there is a clear and urgent need for innovation not only in the technology of diagnosis but also in public policy and medical practice to support the availability and use of better diagnostic tools This book explores the complexities of the diagnostics market from the perspective of both supply and demand unearthing interesting bottlenecks some obvious some more subtle It calls for a multifaceted and broad policy response and an overhaul of current practice so that the growth of bacterial resistance can be stemmed **The Future of**

Drone Use Bart Custers,2016-10-15 Given the popularity of drones and the fact that they are easy and cheap to buy it is generally expected that the ubiquity of drones will significantly increase within the next few years This raises questions as to what is technologically feasible now and in the future what is acceptable from an ethical point of view and what is allowed from a legal point of view Drone technology is to some extent already available and to some extent still in development The aim and scope of this book is to map the opportunities and threats associated with the use of drones and to discuss the ethical and legal issues of the use of drones This book provides an overview of current drone technologies and applications and of what to expect in the next few years The question of how to regulate the use of drones in the future is addressed by considering conditions and contents of future drone legislation and by analyzing issues surrounding privacy and safeguards that can be taken As such this book is valuable to scholars in several disciplines such as law ethics sociology politics and public administration as well as to practitioners and others who may be confronted with the use of drones in their work such as professionals working in the military law enforcement disaster management and infrastructure management Individuals and businesses with a specific interest in drone use may also find in the nineteen contributions contained in this volume unexpected perspectives on this new field of research and innovation Bart Custers is Associate Professor and Head of Research at eLaw the Center for Law and Digital Technologies at Leiden University The Netherlands He has presented his work at international conferences in the United States China Japan the Middle East and throughout Europe and has published over 80 scientific professional and popularizing publications including three books Schizophrenia: Human and

Exotoxins: How Bacteria Fight the Immune System Inka Sastalla,Denise M. Monack,Katharina F. Kubatzky,2016-10-07 Bacterial pathogenicity factors are functionally diverse They may facilitate the adhesion and colonization of bacteria

influence the host immune response assist spreading of the bacterium by e.g. evading recognition by immune cells or allow bacteria to dwell within protected niches inside the eukaryotic cell. Exotoxins can be single polypeptides or heteromeric protein complexes that act on different parts of the cells. At the cell surface they may insert into the membrane to cause damage, bind to receptors to initiate their uptake or facilitate the interaction with other cell types. For example, bacterial superantigens specifically bind to major histocompatibility complex (MHC) II molecules on the surface of antigen presenting cells and the T cell receptor while cytolytins cause pore formation. For intracellular activity, exotoxins need to be translocated across the eukaryotic membrane. Gram negative bacteria can directly inject effector proteins in a receptor independent manner by use of specialized needle apparatus such as bacterial type II, III or type IV secretion systems. Other methods of translocation include the phagocytic uptake of bacteria followed by toxin secretion or receptor mediated endocytosis which allows the targeting of distinct cell types. Receptor based uptake is initiated by the binding of heteromeric toxin complexes to the cell surface and completed by the translocation of the effector proteins across the endosomal membrane. In the cytosol, toxins interact with specific eukaryotic target proteins to cause post translational modifications that often result in the manipulation of cellular signalling cascades and inflammatory responses. It has become evident that the actions of some bacterial toxins may exceed their originally assumed cytotoxic function. For example, pore forming toxins do not only cause cytolysis but may also induce autophagy, pyroptosis or activation of the MAPK pathways resulting in adjustment of the host immune response to infection and modification of inflammatory responses both locally and systemically. Other recently elucidated examples of the immunomodulatory function of cell death inducing exotoxins include TcdB of *Clostridium difficile* which activates the inflammasome through modification of cellular Rho GTPases or the *Staphylococcus* d toxin which activates mast cells. The goal of this research topic was to gather current knowledge on the interaction of bacterial exotoxins and effector proteins with the host immune system. The following 16 research and review articles in this special issue describe mechanisms of immune modification and evasion and provide an overview over the complexity of bacterial toxin interaction with different cells of the immune system.

New Paradigms in Ergonomics Neville A. Stanton, Paul M. Salmon, Guy Walker, 2020-04-28. The systems in which we work continue to evolve creating emergent problems and often strengthening intractable issues. In order to remain relevant and impactful, the discipline of ergonomics needs its paradigms to evolve too. The aim of this book is to provide researchers and practitioners with new paradigms in the form of ideas, concepts, theories, methods, practices and values. The chapters take the reader on a journey through underlying theories, new ways to apply those theories and emerging domains in which ergonomics is expected to play a greater role. Readers of this book will be inspired by these new paradigms in ergonomics and seek to push the boundaries even further. The lifeblood of the science depends on continual evolution and developments to take on the challenges we face in complex sociotechnical systems design and evaluation. Perhaps the most significant take home message from this book is the demonstration of how

theory maps onto practice As such the only remaining paradigm shift is for these ideas concepts methods and practices to be taken up more widely and the discipline advanced until the next paradigm shift occurs The chapters were originally published as a special issue in the journal *Ergonomics* *Ontogeny and Phylogeny of Brain Barrier Mechanisms* Norman R Saunders ,Helen B Stolp,Shane A Liddelow,2016-04-15 The brain functions within an internal environment that is determined and controlled by morphological structures and cellular mechanisms present at interfaces between the brain and the rest of the body In vertebrates these interfaces are across cerebral blood vessels blood brain barrier choroid plexuses blood cerebrospinal fluid barrier and pia arachnoid There is a CSF brain barrier in the neuroepithelium lining the ventricular system that is only present in embryos There is now substantial evidence that many brain barrier mechanisms develop early and that in some cases they are functionally more active and even more specialized compared to adult barriers Therefore barriers in developing brain should be viewed as adapted appropriately for the growing brain and not as is still widely believed immature Considerable advances in our understanding of these barrier mechanisms have come from studies of the developing brain and invertebrates A striking aspect to be highlighted in this special edition is that many of the molecular mechanisms in these very diverse species are similar despite differences in the cellular composition of the interfaces This *Frontiers Topic* comprises articles in three sections Original studies Reviews and Myths Misconceptions Original articles provide new information on molecular and cellular barrier mechanisms in developing brains of primates including human embryos Br chner et al Ek et al Errede et al rodents Bauer et al Liddelow Strazielle Ghersi Egea Saunders et al Whish et al chick Bueno et al and zebrafish Henson et al as well as studies in drosophila Hindle Bainton De Salvo et al Limmer et al The Reviews section includes evolutionary perspectives of the blood brain and blood CSF barriers Bueno et al Bill Korzh There are also detailed reviews of the current state of understanding of different interfaces and their functional mechanisms in developing brain Bauer et al Strazielle Ghersi Egea Liddelow Richardson et al Errede et al Henson et al Br chner et al and in invertebrates Hindle Bainton De Salvo et al Limmer et al Different aspects of the relationship between properties of the internal environment of the brain and its development are discussed Stolp Molnar Johansson Prasongchean et al A neglected area namely barriers over the surface of the brain during development is also covered Br chner et al Clinically related perspectives on barrier disruption in neonatal stroke are provided by Kratzer et al and other aspects of dysfunction by Morretti et al and by Palmeta et al on the continuing problem of bilirubin toxicity Progress in this field is hampered by many prevailing myths about barrier function combined with methodologies that are not always appropriately selected or interpreted These is covered in the Misconceptions Myths and Methods section including historical aspects and discussion of the paracellular pathway a central dogma of epithelial and endothelial biology Saunders et al and a review of markers used to define brain barrier integrity in development and in pathological conditions Saunders et al Use of inappropriate markers has caused considerable confusion and unreliable interpretation in many published studies Torbett et al deal with the

complexities of the new field of applying proteomics to understanding blood brain barrier properties as do Huntley et al with respect to applying modern high throughput gene expression methods Huntley et al The Editorial summarizes the contributions from all authors This includes mention of some the main unanswered but answerable questions in the field and what the impediments to progress may be *Life Sciences : Microgravity and Space Radiation Effects* COSPAR.
