Java Distributed Computing Jim Farley:

Java Distributed Computing Jim Farley, 1998 Distributed computing and Java go together naturally As the first language designed from the bottom up with networking in mind Java makes it very easy for computers to cooperate Even the simplest applet running in a browser is a distributed application if you think about it The client running the browser downloads and executes code that is delivered by some other system But even this simple applet wouldn't be possible without Java's guarantees of portability and security the applet can run on any platform and can't sabotage its host Of course when we think of distributed computing we usually think of applications more complex than a client and server communicating with the same protocol We usually think in terms of programs that make remote procedure calls access remote databases and collaborate with others to produce a single result Java Distributed Computing discusses how to design and write such applications It covers Java's RMI Remote Method Invocation facility and CORBA but it doesn't stop there it tells you how to design your own protocols to build message passing systems and discusses how to use Java's security facilities how to write multithreaded servers and more It pays special attention to distributed data systems collaboration and applications that have high bandwidth requirements In the future distributed computing can only become more important Java Distributed Computing provides a broad introduction to the problems you'll face and the solutions you'll find as you write distributed computing applications Topics covered in Java Distributed Computing Introduction to Distributed Computing Networking Basics Distributed Objects Overview of CORBA and RMI Threads Security Message Passing Systems Distributed Data Systems Databases Bandwidth Limited Applications Collaborative Systems [Programming Embedded Systems in C and C++](#) Michael Barr, 1999 This book introduces embedded systems to C and C++ programmers Topics include testing memory devices writing and erasing flash memory verifying nonvolatile memory contents controlling on-chip peripherals device driver design and implementation and more [Java Cookbook](#) Ian F. Darwin, 2001 A comprehensive collection of problems solutions and practical examples for anyone programming in Java The Java Cookbook presents hundreds of tried and true Java recipes covering all of the major APIs as well as some APIs that aren't as well documented in other Java books The book provides quick solutions to particular problems that can be incorporated into other programs but that aren't usually programs in and of themselves [Enterprise JavaBeans](#) Richard Monson-Haefel, 2004 Enterprise JavaBeans Fourth Edition is the definitive guide to EJB 2.1 It shows you how to build complex mission critical systems using snap-together software components that model business objects and processes EJB 2.1 makes several important steps forward in EJB technology message-driven beans are much more flexible a time service has been added and EJBs have been integrated with web services Enterprise JavaBeans delivers on a promise that was astonishing a few years ago not only can EJBs run without modification on any operating system they can run on any J2EE application server However after writing EJBs you have to deploy them in an application server and deploying EJBs can be a painful task This edition includes the Jboss Workbook

which shows you how to deploy the examples on the open source JBoss Application Server If you've done any enterprise software development in the past few years you already know the extent to which EJB has changed the field Use this book to catch up on the latest developments If you're new to enterprise software development or if you haven't been working with EJB this book will bring you up to speed on this exciting technology for building business systems

Java in Distributed Systems Marko Boger, 2001-05-25 Large and complex software systems such as Internet applications depend on distributed applications Although Java has helped reduce the complexity of distributed systems developers still have to contend with diverse hardware platforms remote communication over networks and system failures Java in Distributed Systems provides a comprehensive guide for anyone wishing to deepen their knowledge of Java in distributed applications Beginning with a tutorial guide to distributed programming in the Java environment it shows you how building blocks from threads to Jini can help you to fulfil Sun's vision that the Network is the Computer It then goes on to focus on aspects that are still challenging researchers such as concurrency distribution and persistence Key Features One of the few books to focus specifically on Java for building distributed applications Coverage includes threads sockets RMI CORBA Voyager Mobile agents JDBC object oriented databases Java spaces and Jini Includes advanced chapters on the cutting edge of Java language development including the author's own proposed DeJax Distributed Java an open source project that offers a unified approach to concurrency distribution and persistence

Java Message Service David A Chappell, Richard Monson-Haefel, 2000-12-04 This book is a thorough introduction to Java Message Service JMS the standard Java application program interface API from Sun Microsystems that supports the formal communication known as messaging between computers in a network JMS provides a common interface to standard messaging protocols and to special messaging services in support of Java programs The messages exchange crucial data between computers rather than between users information such as event notification and service requests Messaging is often used to coordinate programs in dissimilar systems or written in different programming languages Using the JMS interface a programmer can invoke the messaging services of IBM's MQSeries Progress Software's SonicMQ and other popular messaging product vendors In addition JMS supports messages that contain serialized Java objects and messages that contain Extensible Markup Language XML pages Messaging is a powerful new paradigm that makes it easier to uncouple different parts of an enterprise application Messaging clients work by sending messages to a message server which is responsible for delivering the messages to their destination Message delivery is asynchronous meaning that the client can continue working without waiting for the message to be delivered The contents of the message can be anything from a simple text string to a serialized Java object or an XML document Java Message Service shows how to build applications using the point to point and publish and subscribe models how to use features like transactions and durable subscriptions to make an application reliable and how to use messaging within Enterprise JavaBeans It also introduces a new EJB type the MessageDrivenBean that is part of EJB 2.0 and discusses integration of
