## Java Source Code Text Mining:

*Natural Language Processing and Information Systems* Zoubida Kedad,Nadira Lammari,Elisabeth Métais,Farid Meziane,Yacine Rezgui,2007-08-15 This book constitutes the refereed proceedings of the 12th International Conference on Applications of Natural Language to Information Systems NLDB 2007 held in Paris France in June 2007 It covers natural language for database query processing email management semantic annotation text clustering ontology engineering natural language for information system design information retrieval systems and natural language processing techniques **Text Analysis Pipelines** Henning Wachsmuth,2015-12-02 This monograph proposes a comprehensive and fully automatic approach to designing text analysis pipelines for arbitrary information needs that are optimal in terms of run time efficiency and that robustly mine relevant information from text of any kind Based on state of the art techniques from machine learning and other areas of artificial intelligence novel pipeline construction and execution algorithms are developed and implemented in prototypical software Formal analyses of the algorithms and extensive empirical experiments underline that the proposed approach represents an essential step towards the ad hoc use of text mining in web search and big data analytics Both web search and big data analytics aim to fulfill peoples needs for information in an adhoc manner The information sought for is often hidden in large amounts of natural language text Instead of simply returning links to potentially relevant texts leading search and analytics engines have started to directly mine relevant information from the texts To this end they execute text analysis pipelines that may consist of several complex information extraction and text classification stages Due to practical requirements of efficiency and robustness however the use of text mining has so far been limited to anticipated information needs that can be fulfilled with rather simple manually constructed pipelines **Mining Complex Data** Zbigniew W. Ras,2008-05-26 This book constitutes the refereed proceedings of the Third International Workshop on Mining Complex Data MCD 2007 held in Warsaw Poland in September 2007 co located with ECML and PKDD 2007 The 20 revised full papers presented were carefully reviewed and selected they present original results on knowledge discovery from complex data In contrast to the typical tabular data complex data can consist of heterogenous data types can come from different sources or live in high dimensional spaces All these specificities call for new data mining strategies *Web, Artificial Intelligence and Network Applications* Leonard Barolli,Makoto Takizawa,Fatos Xhafa,Tomoya Enokido,2019-03-14 The aim of the book is to provide latest research findings innovative research results methods and development techniques from both theoretical and practical perspectives related to the emerging areas of Web Computing Intelligent Systems and Internet Computing As the Web has become a major source of information techniques and methodologies that extract quality information are of paramount importance for many Web and Internet applications Data mining and knowledge discovery play key roles in many of today s prominent Web applications such as e commerce and computer security Moreover the outcome of Web services delivers a new platform for enabling service oriented systems The emergence of large scale distributed computing paradigms

such as Cloud Computing and Mobile Computing Systems has opened many opportunities for collaboration services which are at the core of any Information System Artificial Intelligence AI is an area of computer science that build intelligent systems and algorithms that work and react like humans The AI techniques and computational intelligence are powerful tools for learning adaptation reasoning and planning They have the potential to become enabling technologies for the future intelligent networks Recent research in the field of intelligent systems robotics neuroscience artificial intelligence and cognitive sciences are very important for the future development and innovation of Web and Internet applications
