Mascolo, 2005-03-31 Middleware provides an integration framework for multiple and potentially diverse computing platforms It allows developers to engineer distributed applications more easily providing abstractions and primitives to handle distribution and coordination Middleware is constantly facing new challenges Today's advances in computing including development of pervasive applications exacerbates the diversity problem introducing variations not only in terms of performance but also in terms of environments and device characteristics Software engineers are therefore challenged both in the area of the development of new and scalable middleware systems where open heterogeneous component based platforms should provide richer functionality and services and in the area of application development where tools to simplify the use of middleware

solutions are necessary Software Engineering and Middleware is the premier workshop for the search and practice community of software engineering working in both areas to present and discuss new ideas in this field

SEM2004 was the fourth international workshop on software engineering and middleware of the EDO SEM workshop series Previous workshops of this series were successfully held in 2002 2000 and 1999 Most of the proceedings have been published by Springer in the Lecture Notes in Computer Science series
