Abstract: The purpose of this study was to investigate the effect of a 12-week training program on the physical and psychological health of elderly people. The study was conducted in a community center in a city in the north of Iran. The study was a quasi-experimental design with a pre-test and post-test. The sample consisted of 30 elderly people (15 men and 15 women) who were selected by purposive sampling. The data were collected using a questionnaire and a physical activity diary. The results showed that the training program had a significant effect on the physical and psychological health of the elderly people. The study suggests that a 12-week training program can be an effective intervention for improving the health of elderly people.
