It offers inspiration for reaching beyond prepared curricula, engaging in discovery along with your students, and using your lessons to support the Next Generation Science Standards (NGSS). The book provides examples of Earth science labs and activities you and your students can do as co-investigators, insights into student expectations and misconceptions, plus ideas for inspiring true investigation stories of real scientific discovery translated for classroom consideration, exploration of how you can mentor students as a teacher-scholar, and guidance on how to translate the sweeping core ideas of the NGSS into specific examples students can touch, see, and experience. The authors of Learning to Read the Earth and Sky are husband-and-wife educators who promote science as something to figure out, not just something to know. They write, "It is our hope that readers will find our book short on education speak, long on the joy of doing science, and full of stories of students, classrooms, scientists, and Earth and sky."
