

## Lab: Interpreting Fossil Evidence

**Background:** Like all science, biology is a process of inquiry. Science is a human process of trying to understand the world around us. There is no one method used by all scientists, but all scientific inquiry is based on the same principles. Scientific thinking is based on both **curiosity** and **skepticism**. Skepticism is the use of **critical and logical thinking** to evaluate results and conclusions. Scientific inquiry also requires **evidence**. One of the most important points of science is that scientific evidence may support or even overturn long-standing ideas.

In the following activity, you and the members of your team will play the roles of paleontologists working in Montana's famous fossil fields. You will simulate the process of uncovering the fossil remains of an ancient organism and work together to hypothesize the type of animal you have discovered during several days of "digging".

**Procedure:** Follow the instructions below. Obtain an envelope from your teacher and form a group of 2 - 4 students. *(Make sure you only remove the number of fossils indicated at each step and do not look at the others in the envelope.)*

One clear crisp afternoon in October, you find four well preserved and complete fossils.

**Open envelope and randomly remove 4 fossils.**

**Day 1:** That night in camp, after dinner, around a Coleman lantern, you and your colleagues begin to assemble the 4 bones you found earlier. Since the bones were all found together in an undisturbed layer, you assume that they are all from the same animal. You spend the rest of the evening trying different arrangements of the bones in hopes of identifying the animal before you get tired.

Take 5 minutes to assemble the bones and make notes in your **data table #1**. What kind of animal do you think this is?

**Day 2:** You wake up to a beautiful Montana morning and you hurry back out to the dig site. The rock layers that hold your fossils are very hard and only give up three more specimens. As the day ends you make your way back to camp for another try at assembling the mystery animal.

**Open envelope and remove 3 more fossils.**

Take 5 minutes to assemble all 7 bones and make notes in **data table #2**. What kind of animal do you think this is now?

**Day 3:** The next morning is cold. You can tell that winter is just around the corner and you know that this will be the last day of the digging season, and

**Exploring Physical Anthropology Laboratory Manual & Workbook** Suzanne E. Walker-Pacheco, 2017-02-01

Exploring Physical Anthropology is a comprehensive full color lab manual intended for an introductory laboratory course in physical anthropology. It can also serve as a supplementary workbook for a lecture class particularly in the absence of a laboratory offering. This laboratory manual enables a hands on approach to learning about the evolutionary processes that resulted in humans through the use of numerous examples and exercises. It offers a solid grounding in the main areas of an introductory physical anthropology lab course: genetics, evolutionary forces, human osteology, forensic anthropology, comparative functional skeletal anatomy, primate behavior, paleoanthropology, and modern human biological variation.

Down from the Trees: Man's Amazing Transition from Tree Dwelling Ape Ancestors covers the evolution of man from tree dwelling ape to Homo sapiens as he is today. Using easy to read language, the author takes complex jargon filled material and extracts the essence of the topic and conveys it in a clear and engaging manner. He approaches the subject of human evolution from three different disciplines: fossil evidence and its interpretation, evolutionary theory and its applicability, and genetic evidence and its ability to unlock prehistoric information. The third discipline has advanced unbelievably in the last few years and this book includes the most up to date research. There is nothing more interesting to humans than the story of their origins. The evolutionary process of a tree dwelling ape becoming a walking talking man who has developed the technology to walk on the moon, transplant hearts, or modify living things is no trivial story. This book provides a fascinating and comprehensive view of what science has learned of human evolution.      Why Should I Believe? Why Should You Believe? Terry Read, 2014-10-10

This is one man's journey to discover the truth about the Bible. Terry Read grew up in a Christian household and went to church. But Terry did not live in a bubble. Terry watched documentaries, read magazines, read encyclopedias, and went to public school. Terry knew that what he was learning about science from all of these other sources did not mesh with the Bible. Terry tried to make the two world views fit together somehow. But Terry discovered another option that he had never been taught: that a person could believe the Bible as it reads. The Bible does not contradict good science. Terry studied this. He learned that the biblical world view is actually the only world view that is consistent with even doing science. Terry's discovery was such great news to him that he wanted to share it. He knew that other people would be happy to hear this message. He knew that whether or not they admitted it, other people were doing mental gymnastics as he had done to make the Bible fit the science. Terry could see the devastation brought on society because people do not believe the Bible. But when Terry tried to share his discovery, he became frustrated. The reason Terry had so much consternation was the unexpected source of the frustration: church leadership. Church leadership was actually afraid to share this message that people really

can believe the Bible This book documents Terry's struggles and tells what you can do      **General Catalog** Iowa State University, 1989      Paleopathology Disease in the Fossil Record Bruce M.
