STUDY OF THEODOLITE IN DETAIL – PRACTICE FOR MEASUREMENT OF HORIZONTAL AND VERTICAL ANGLES

The theodolite is one of the most precise surveying instruments and is suitable for measurement of angles in horizontal as well as vertical planes.

PARTS OF VERNIER THEODOLITE

- 1) **THE LEVELING HEAD:** this usually consists of a tribrach and triivet carrying one foot screw on each of its three arms.
- 2) **THE TWO SPINDLES:** The theodolite has an outer axis and an inner axis of rotation which are both coincident with the vertical axis of the instruments.
- 3) **THE LOWER PLATE AND UPPER PLATE:** the outer axis is attached to the lower plate which is also called the scale plate. This plate is circular in shape and beveled at the edge. It is graduated from 00 to 3600 in the clock wise direction. The inner axis is attached to the upper plate which is also known as the vernier plate. The upper clamp and upper tangent screw facilitate fixing it to the lower plate at any desired position.
- 4) **PLATE LEVEL TUBES:** two level tubes are provided on the vernier plate at right angles to one another. These are known as Plate level.

 Building Confidence - Vol.1** Stephen DeMeo,2020-07-31 Global warming our current and greatest challenge is without
 precedent Among the many consequences that are impacting our society one unanticipated concern involves scientific truth
 When the President of the United States and others in his administration declare that global warming is fake science it calls
 into question what real science is and what real school science should be I will argue that real science is quality science one
 that is based on the rigorous collection of reliable and valid data To collect quality data requires bending over backwards to
 get things right and this is exactly what makes science so special Truth is made when scientists go this extra yard and devise
 controlled experiments collect large data sets confirm the data and rationally analyze their results Making scientific truth
 sounds difficult to do in the science laboratory but in reality there are many straightforward ways that truth can be
 constructed In the first of two volumes I discuss twelve such ways I call them Confidence Indicators that can allow students
 to strongly believe in their data and their subsequent results Many of these methods are intuitive and can be used by young
 students on the late elementary level all the way up to those taking introductory college science courses As in life science is
 not without doubt In the second volume I introduce the concept of scientific uncertainty and the indicators used to calculate
 its magnitude I will show that science is about connecting confidence with uncertainty in a specific manner what I refer to as

the Confidence Uncertainty Continuum expression This important relationship epitomizes the scientific enterprise as a search for probabilistic rather than absolute truth This two volume set will contain a variety of ways that data quality can be instituted into a science curriculum To support its use many of the examples that I will present involve science teachers as well as student work and feedback from different grade levels and in different scientific disciplines Specific chapters will be devoted to reviewing the academic literature on data quality as well as describing my own personal research on this important but often neglected topic
