

Lab Report Template - **SAMPLE**

In this sample, the purple areas are completed by the teacher prior to the start of the lab and the orange areas are completed by the student.

NAME: *Suzie Smith*

DATE: *3/29*

LAB NAME: *The difference between chemical and physical changes*

PROBLEM: *How can you determine the difference between a chemical and a physical change?*

OBSERVATIONS: *[please watch the board as we observe a few images that represent chemical or physical changes]*

In the first picture, wood is being cut, but it's still wood, just a different shape. In the second picture, wood is being burned. It's no longer wood, but is now ashes.

HYPOTHESIS:

The difference between a chemical and physical change is that in a chemical change, something new is made, but in a physical change, the substance is not changed into something new.

CONDUCT THE EXPERIMENT:

Record your materials, your experimental design, and the procedures you followed.

Materials:

*Two graduated cylinders
40 mL of vinegar
10 drops of food coloring
1 teaspoon of baking soda*

Procedure:

Step 1: I first will place 20 mL of vinegar in two different graduated cylinders.

Step 2: In one of the graduated cylinders (cylinder A), I will put 10 drops of food coloring. I will observe and then record the changes.

Step 3: In the second graduated cylinder (cylinder B), I will add one teaspoon of baking soda. I will observe and then record the changes.

Applied Analog Electronics: A First Course In Electronics Kevin Karplus, 2023-06-06 This textbook is for a first course on electronics. It assumes no prior electronics experience but does assume that students have had calculus 1 single variable differential calculus and high school physics. A key idea of the course is that students need a lot of design experience and hands on work rather than a lot of theory. The course is centered around the labs which are a mix of design labs and measurement modeling labs. This unique volume takes students from knowing no electronics to being able to design and build amplifier and filter circuits for connecting sensors to microcontrollers within 20 weeks. Students design a digital thermometer, a blood pressure meter, an optical pulse monitor, an EKG, an audio preamplifier, and a class D power amplifier. They also learn how to measure and characterize components including impedance spectroscopy of a loudspeaker and of electrochemical electrodes. Related Link s

Help! I'm Teaching Middle School Science C. Jill Swango, Sally Boles Steward, 2003 Like your own personal survival guide. Help! I'm Teaching Middle School Science is a nontechnical how to manual. It is especially for first year teachers. But even veteran teachers can benefit from the plentiful ideas, examples, and tips on teaching science the way middle schoolers learn best. The book covers all the basics: what to do on the first day of school, including icebreaker activities, preparing safe and effective lab lessons, managing the classroom, working with in-school teams as well as parents. But its practical and encouraging approach doesn't mean it shortchanges the basics of effective pedagogy. You will learn how to handle cooperative learning and assessment, how to help students write effectively, and the importance of modeling for early adolescents.
